

## Corner Shelf Installation

**Note:** Each shelf has 4 brackets – 2 per side of the shelf.

1. Decide on the height you would like your shelves.
2. Hold the shelf in the position you have chosen using a spirit level to ensure it is level.
3. With a pencil mark a line along the bottom of the shelf for both sides of the shelf.
4. Using a ruler, make a mark along both lines at the appropriate distance for the shelf you are installing – see table below.

Shelf Size	Distance from corner of the wall	Distance from corner of the wall
Small	6cm	15cm
Medium	6cm	20cm
Large	6cm	25cm

5. Place a bracket at each mark, ensuring it is at a right angle to the wall with the bottom of the bracket sitting on the line. Mark the screw hole with a pencil. Repeat for each of the 4 brackets.
6. Drill the holes, hammer in the rawl plugs and screw in the brackets (NOTE: use the longer screws).
7. Place your shelf on the brackets and screw in the screws provided to secure your shelf (NOTE: use the shorter screws).

Photo below to show how the shelf sits on the brackets.
