# FITTING GUIDE - D-STRAP

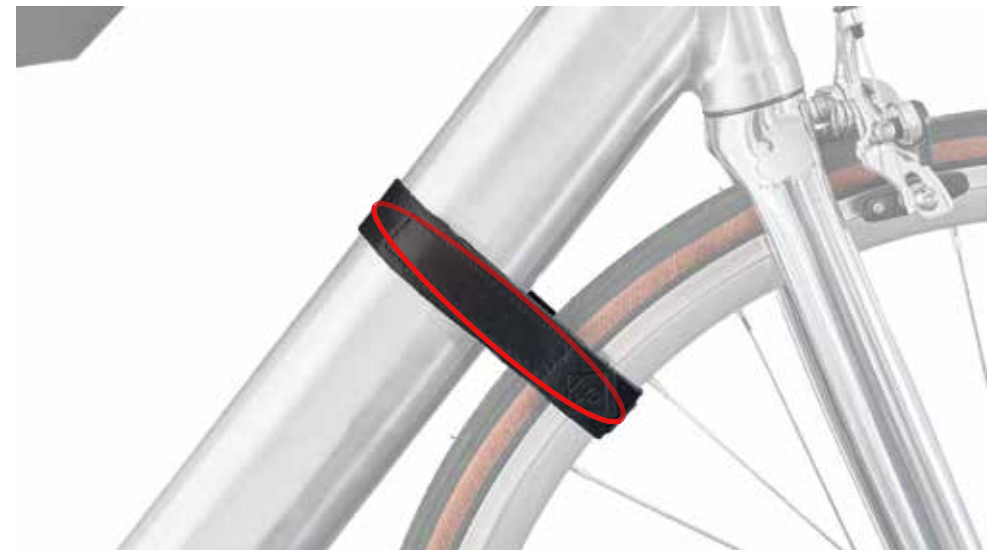

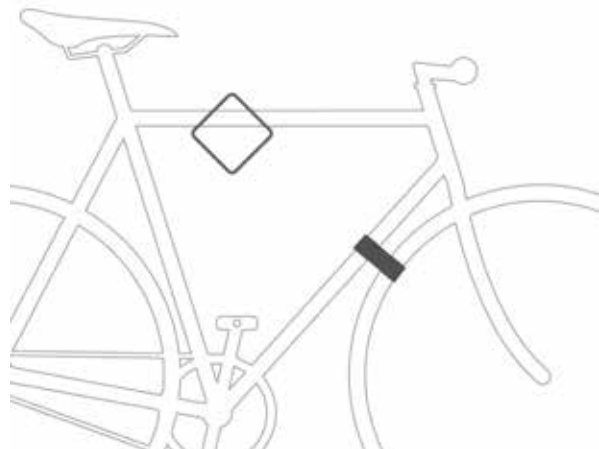

## WHICH SIZE DO I NEED FOR MY BIKE?

With our Fitting Guide you can easily find out what size your D-Strap must be.

To determine the correct length, you should ideally use a flexible tape measure to measure the circumference of the down tube and rim of the front wheel at its narrowest point.

If the circumference is less than or equal to 38cm you will need length M.

If the circumference is larger than 38cm you need length L.

Please make sure to measure **ONLY** the circumference **WITHOUT** overlapping!
