01 **CUTTING THE KICKBACK 3 LEGS**

**01 A**
With the KickBack legs in the down position, measure the distance between the mounting plate and the ground. This number is Measurement C.

**01 B**
With the KickBack legs in the up position, place the rear wheel on something a half inch above the ground (a larger wrench works great) and take the same measurement. This measurement is Measurement D.

Subtract Measurement D from your Measurement C and write down the result.

**01 C**
Remove the rubber feet and plastic end plugs from the KickBack's legs.

If you are installing on an EdgeRunner: you can cut the legs 3 inches (76 mm) from the bottom. This will leave a little over half an inch between the tire and the ground.

**Please note:**
If you purchased a pre-cut KickBack 3, you do not need to take this step. This step is intended for uncut KickBack 3s.

If you are fitting the KickBack to an EdgeRunner and want to use the default kickstand height, you can skip to step 01 C.
01 D
If you're installing the KickBack on another Xtracycle or want to fine tune things, measure up the distance you calculated in the end of step 01 B from the bottom of each leg and mark that location to cut.

NOTE: Sometimes the markings on the KickBack legs are inconsistent. Always double check that your cuts are even with a ruler.

01 E
Cut each leg where appropriate. A pipe-cutter is the easiest solution, but a hacksaw and clamp-on guide will also work.

Replace the end caps and rubber feet. You are now done cutting the KickBack 3 legs.
