Warranty

Xtracycle KickBack 3 RadAdaptor is guaranteed to be free from manufacturing defects for one (1) year from the original date of purchase.

Defective products will be repaired or replaced at Xtracycle’s discretion. To determine if a warranty claim is valid you may be required to return the product to Xtracycle for inspection. Xtracycle is not responsible for removal, installation or shipping costs. This warranty applies only to the original buyer and is not transferable.

This warranty does not cover damage from use of this product outside of its intended range or that resulting from modification or neglect. It also does not cover wear and tear resulting from the normal use of the product.

Double your warranty to two years!
Register your Xtracycle RadAdaptor within 14 days of purchase to extend your warranty to two years.

KickBack 3 Digital Manual:
http://XCY.CL/kb3install

What's Included:

One KB3 Radaptor

Note: This guide replaces steps 1-3 of the KickBack 3 product manual when installing on a FreeRadical. Please refer to that manual for required tools and additional installation steps 4 - 6.
STEP 1: Install the Bridge Bolts

**Step 1a:** With the KickBack legs in the up position, place both Xtracycle BridgeBolts over the Xtracycle’s front bridge (A).

**Step 1b:** The front, non-drive BridgeBolt leg passes through a rectangular cutout. Place the rectangular washer over this leg, then lightly thread on a washer and nut.

**Step 1c:** Thread a washer and nut onto each of the other three BridgeBolt legs.

*Note:* You will need to lower the stand to access two of them.

STEP 2: Install the FreeRadaptor

**Step 2a:** Slide the KB3 Radaptor in between the boom tube and the KickBack so that it sits at the front of the mounting plate and cups the boom tube (B).

**Step 2b:** Place the BoomStrap over the boom tube (B) and partially thread the two M5 bolts into the KickBack 3 plate. Make it snug, but do not tighten.

STEP 3: Tighten Things Down

**Step 3a:** Moving the legs as necessary, lightly snug all four nuts with a 10mm socket wrench. Alternating between nuts can keep the KickBack from pulling to one side or the other.

**Step 3b:** Put the legs into the down position and pull them towards the front of the bike to ensure that the KickBack is rotated as far forward as possible and centered on the boom tube (B).

*Note:* It is normal for the kickstand plate on the FreeRadical to create a bit of a gap where it doesn’t perfectly match the trough on the mounting plate.

**Step 3c:** Tighten the M5 bolts on the BoomStrap above the boom tube.

**Step 3d:** Torque all four nuts to 6 Nm.

STEP 4: Refer to KB3 Manual Instructions
