ASSEMBLY

1. The Mini MagicCarpet is designed to rest on the FlightDeck and mount to the aluminum racks on your Xtracycle bike. The Mini MagicCarpet will work with or without a Hootie Safety Rail installed, with or without an installed Yepp seat, and with or without another Mini MagicCarpet installed.

2. Set a single Mini MagicCarpet on the FlightDeck with red panel facing the rear of bike and silver side up. Position pad on deck such that MagicCarpet fastening velcro does not compete for space with cargo bag straps.

3. Thread long end of Mini MagicCarpet fastening strap down and between FlightDeck and EdgeRunner rack, avoiding cargo bag straps. Strap end will now be dangling beneath FlightDeck. Next, pull strap down and around rack and back out towards you.

ASSEMBLY

4. With hook side of velcro facing you, thread Mini MagicCarpet securing strap up through plastic ring. Pull slack through ring until strap becomes snug around EdgeRunner rack.

5. Pull strap down, gently adding pressure to strap to tighten around EdgeRunner rack. You should have 3-4 inches of strap length to hold on to once pulled snug. Starting just below plastic ring, begin to mate velcro sides by applying pressure to strap with your fingers.

6. Fold extra strap length beneath rack and behind cargo bags. Make sure velcro is engaged by running your finger along strap under rack.

REPEAT STEPS 1-6 FOR ALL 4 STRAPS

7. Mini MagicCarpet should be firmly attached to bicycle and ready to ride.

8. A proper Mini MagicCarpet and MagicCarpet installation is shown in picture at right. Note that there should not be a gap between the Magic Carpets.

When using a Yepp Child Seat - Simply use one Mini MagicCarpet in front or rear position - wherever Yepp seat is not located.

WARNING

⚠️ The maximum weight of passenger(s) riding on the Xtracycle FlightDeck is 120 lbs, assuming passengers are resting feet on U-Tubes.

⚠️ Ensure your Mini MagicCarpet is properly attached by using the installation instructions.

⚠️ All passengers should wear a helmet while riding a bicycle. Reflective bands are not a substitute for riding with front & rear lights at night.
