PORTERPPACK MANUAL 2021

# 01 INSTALLING THE PORTERPACK ON THE PORTERRACK

## Please note:

The PorterRack is required for use with the PorterPack.

### 01 A

Prior to installation, the plastic panels that help the PorterPack keep its shape must be installed. Slide these into the pockets on the inside sides of the pack.

### 01 B

Before placing the PorterPack on the PorterRack, flip the mesh pockets located on the back of the PorterPack onto the pack's lid. This will give you easy access to the rear attached straps. Open these straps (blue arrow).

### 01 C

Open the hook and loop strap located on the bottom of the PorterPack.

### 01 D

Place the PorterPack onto the PorterRack. Attach the bottom hook and loop strap around the center support on the PorterRack.

---

**01 E**

Secure the hook and loop straps located on the back of the PorterPack onto the corresponding horizontal bars on the back of the PorterRack.

---

**01 F**

Flip the rear mesh pockets down and push them onto the PorterPack to attach the backs of the pockets to the hook and loop tape on the bag. Your installation is now complete.

## O2 CLOSING THE ROLL-TOP

### O2 A

To roll the PorterPack top closed, press the top edges together and roll them down towards the bag.

### O2 B

Clip the securing strap in place.

# O3 CONVERTING THE PORTERPACK INTO A BASKET

## 03 A

To use the PorterPack as an open basket, ensure the cinch strap is not connected over the top. Press the roll-top into the PorterPack, as if it is lining the bag.

## 03 B

Clip the cinch strap into the buckle located inside the front of the PorterPack. This prevents the strap from dangling and potentially rubbing on the front wheel.

## Care & Maintenance

If the PorterPack becomes dirty, it can be gently scrubbed with a washcloth and soap and water. Hand wash only and air dry.
