

Nautic-Compact L

Hot Water on Board

**NEW !
and pressure
resistant!**

**Hot water via
warm air and
electric**

Standard sizes 6 liters and 10 liters

Nautic-Compact Air is the handy addition to your warm air heating system.

Manufactured from top quality acid-proof Niro V4A stainless material

for 230V

with heat exchanger to connect to existing air heating system or in combination with both connectors.

Nautic-Compact Air is made to the proven standards of

ELGENA Quality - 5 year factory warranty -

MADE IN GERMANY

For yacht - boat - caravan - mobile home - catering vehicles

Nautic-Compact Air is a water heater specifically designed for motor homes, yachts, boats and catering vehicles.

The standard device is available in 2 models and 2 sizes:

Type M is used especially for motor boats and motor homes. The device connects to the convection heater and heats the water supply via the device's built-in heat exchanger during the convection heating phase. This means that the domestic water is heated at no cost, reaching roughly the same temperature as the heated air.

Type ME is a combination device - it can heat domestic water like Type L via the convection heating, or as stand-alone through the built-in electrical heater. The water is heated to about 70°C.

When fully heated (via electric to about 70°C, via hot air up to the temperature of the air stream), mixing in cold water can increase the available warm water supply by 2-3 times.

Nautic-Compact Air can be standard or retro-fitted to any cold water supply that uses hose lines. It can connect to submersible pumps, foot or hand pumps. Connecting a pressure pump requires installation of a safety valve kit 3 bar.

The devices are designed for hose connections to counteract the vibrations in a maritime and mobile environment.

Nautic-compact Air is designed so that even when the domestic water tank is emptied, the boiler is always full and can never be pumped dry. Therefore, draining it requires the water drain valve to be opened.

Nautic-compact Air boiler, heat exchanger and radiator are manufactured from top quality acid resistant Niro V4A stainless steel material and fully insulated. The solid insulation makes warm water available to you even on the next day.

The device can simply be fitted in the cargo area, underneath seating or wherever else there is suitable space for it. Each device comes with detailed mounting instructions.

5 year factory warranty

Standard features for Type LE:

- Self regulating radiator
- 1m connection cable
- overheating protection
- water drain valve
- Heating element 230V/500W (2.2A)

Available separately for pressure pump connection:

- Safety valve kit 3 bar No. 100359
- Pressure reduction valve No. 100323

Änderungen vorbehalten.

Dimensions (L x W x H)

6 liters 38 x 22 x 23cm ~4kg
10 liters 53 x 22 x 23cm ~5kg

Custom dimensions also available!

domestic water connection = 10mm
air hose connection = 65-75mm
