FOR IMMEDIATE RELEASE

Strike Develops Mounting Solutions with NFC Technology for Student Transit Service

Brisbane, August 24, 2018 – As more and more schools employ smart ID card systems, Strike Group partnered with a Systems Integrator who needed to mount devices safely in a bus and needed the device's NFC reader to be accessible.

The Systems Integrator uses NFC technology to accurately know which students had entered the bus. Students are required to scan their ID card as they enter. This simple and cost-effective system brings safety, efficiency, and peace of mind for all end-users, primarily for both parents and schools.

Strike developed and embedded NFC antenna that allowed students to access the NFC function of the device from a convenient location on the rear of the cradle. It simplified the setup and allowed the driver to see the screen, whilst students could scan. Click [here](#) to watch the demo video.

'NFC technology is playing a key role in the transport system. With Strike's innovative mounting solutions and NFC technology, we help provide an intuitive user experience that can easily be applied to the transit environment,' says Chris Ryan, CEO of Strike Group.

At Strike, we design our products to be both practical and powerful whilst recognising the needs of different industries. Strike Mounts can be used not only in vehicles but in locations where a client would find it beneficial to mount a tablet or a smartphone securely. Industries such as the medical, education, aviation, mining, transport & logistics, retail, payments and taxi industries would all benefit from NFC extenders in mounts.

Strike's wide range of car cradles can be viewed [here](#).
