

GLOBE ICE LANTERN BALLOONS

Create Luminaries Made of Ice!

Makes Large & Small Ice Lanterns • 100% Biodegradable • Freezing Base Sold Separately

Why Double-Strength Ice Lantern Balloons?

- Stronger than a single balloon!
- Better at maintaining the round shape.
- Easier to handle when filled with water.

Due to a volume purchase, we've secured similar pricing to the single balloons we've offered in the past. And that's even with supplying two balloons—one inside the other!

(We are also selling packs of single balloons and the balloon inserting tool if you don't mind a little work.)

A little history . . .

For years, people fell in love with the original green **WINTERCRAFT®** Ice Lantern Balloons that were the thickest, strongest punch ball balloons made and held their round shape even when filled with water. But, the balloon manufacturer started having production quality issues and we spent hours sorting through every shipment for "top quality" vs "2nds". Eventually, the manufacturer went out of business and we were forced to find a replacement balloon. Searching near and far, we found the "Blue extra coating" balloons that worked well, but not quite the same. Then last winter, our Ice Wrangler had a light bulb moment. She always felt regular punch balls were never strong enough to hold a round shape. But, she asked herself, what if one punch ball was inside another? The results were simply amazing and the **DOUBLE-STRENGTH ICE LANTERN BALLOONS** were born! *Enjoy the Glow!*

PRO TIP: Before securing the water-filled balloon with the Easy-close Clip, release any air that was captured along with the water. This will help the top of your finished Globe Ice Lantern be rounder.

LATEX

WARNING CHOKING HAZARD ADULT SUPERVISION REQUIRED.
Children under 8 years can choke or suffocate on uninflated or broken balloons. Keep uninflated balloons from children. Discard broken balloons at once. Balloons made of natural rubber latex which may cause allergic reactions. Balloons made in China.

WINTERCRAFT®

**DOUBLE-
STRENGTH
— BALLOONS —**

WINTERCRAFT®

A Double-Strength Balloon is created by placing a strong blue balloon inside a strong green balloon.

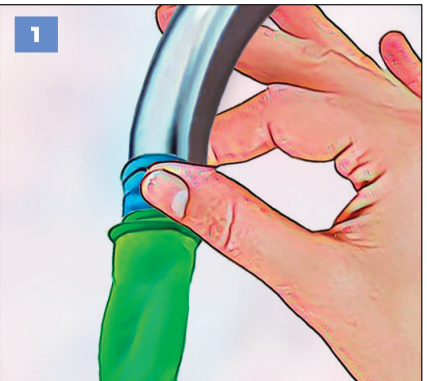

The water goes in the blue balloon and the green balloon provides the support.

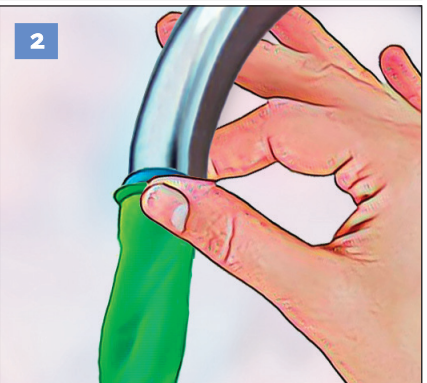

Easy to Fill

To fill a Double-Strength Balloon with water, pull the neck of the green balloon back to expose the top of the blue balloon.

Stretch **JUST** the blue balloon's mouth around a faucet head.

While keeping the blue balloon in place, pull up and stretch the mouth of the green balloon over the blue balloon and the faucet to create a seal.

Hold both balloons firmly around the faucet with thumb and forefinger as the pressurized water fills both balloons at the same time to size that sits nicely in freezing base. Twist balloon neck twice and clip closed.
