# Create a Sensation with Wintercraft® Globe Ice Lantern Kits

*Easy-to-Make! • Indoor/Outdoor • All Ages*

***Welcome to Wintercraft® Globe Ice Lantern Kits and Supplies  
Here are 5 of the most common questions:***

### ***What is a Globe Ice Lantern?***

The simplest way to define any type of ice lantern is that it is a “shell of ice with a candle inside”. The shell protects a flame from the elements so that the ice lantern can act as an illuminated decoration.

### ***How do you get the candle inside?***

When the Wintercraft® globe ice lantern balloon is filled with water and put in freezing conditions, the water will freeze from the outside in. Stop the freezing process (by removing the balloon) while there is still water inside. Releasing the water exposes a cavity in the ice which is perfect for a light source.

### ***Can I add color to the ice?***

The best way to add color to your globe ice lantern display is to use colored LED lights made for outdoor use. (Food coloring tends to be very messy!)

### ***Can Wintercraft® Globe Ice Lantern Balloons make both large and small lanterns?***

Yes! These field-tested, heavy-duty balloons are extra thick and round, so they consistently produce large and small beautiful spheres of ice. Large balloons use more water and small balloons use less. When paired with the Wintercraft® Freezing Bases, the process of making globe ice lanterns is hassle-free. Plus - 100% biodegradable and made in the USA.

### ***Do I need to make a chimney?***

It is OK to flip the finished lantern over and use the bottom hole as the chimney . . . , BUT if you do make a chimney, it allows the best, most interesting ice to stay on top where the candle will be able to light it up! (When LED lights are used, a chimney is not needed.)
