TKS Introduction

Now in its third generation of poles, TKS has proven to be a huge success because of the way that regardless of budget, any angler can buy into and enjoy its benefits. From budget poles through to flagship offerings such as the 1001, we're proud to be providing poles that stand the test of time because of their versatility. Add in the option of purchasing spares that are universal across the range and it's clear to see why TKS is the pole system of choice for 1,000s of anglers across the UK.

Whatever TKS pole you buy, you can rest assured that there will be top kits to suit your needs. With a universal design that sees ALL our kits fit ALL of our poles, performance is never compromised thanks to the highest grade of carbons and features like reinforcement bands and pre-fitted pure PTFE bushes. With a choice of power, match and F1 Shalla kits, no matter how you fish there's a top kit to fit your pole and for that matter, any TKS pole ever produced.

Fusion

A process that bonds two different grades of carbon together enabling us to develop lighter, stronger and more rigid poles. This process is used on all models.

Bi-Lateral Joint Reinforcement

A 3K carbon weave added to both the male and female joints to reinforce them and prevent wear, and joints sticking together in wet weather.

Matrix High Impact Resin

Matrix Resins are proven to increase the strength, toughness and the durability of composites whilst also reducing the overall weight. Matrix Resins are used in the production of all TKS poles.

MTM Carbon

All materials used in the production of TKS poles are purchased from the one of the world's largest carbon manufactures – Toray in Japan.

Elastic Ratings

Each TKS pole has been designed here in the UK, so you can be assured they can withstand the elastic rating we put on each model.

Smooth Ship Finish

This is an anti-friction finish that's added to each TKS model to ensure smooth shipping when fishing. It also prevents your hands sticking to the pole whilst wet.

TKS 1001 3G 16.0M

£4,200.00

The TKS 901 was ground-breaking, but we have pushed those ground-breaking boundaries even further with the new TKS 1001. Using a totally new mandrel, along with exclusive Japanese carbon and resins, we have developed not only the stiffest 16m pole on the market (it's even stiffer than the 901) but at the same time developed the slimmest 16.0m on the market, measuring an incredible 43mm at 16.0m butt. And finally, we have managed to make this pole 35% stronger than the 901, making this pole possibly the best pole ever produced. Top kits are shorter, without effecting the poles overall length and feature a unique depth marker print, so you can quickly find the correct amount of depth you require, or know what depth you were actually fishing at.

Parabolix Ultra II Feeder Rod Range NEW

from £230.00

Manufactured using Nano Carbon, the new Parabolix Ultra 11 Feeder rod range offers stronger action throughout its range, enabling you to cast further, and more accurate, without the action being compromised when playing fish. Nano Carbon and resin is an incredibly robust material in strength, and almost twice as strong as conventional resins when cured, yet without any change in weight or in action. These attributes have helped us develop our best range of feeder rods.

Power in the lower sections of each rod has been increased to ensure casting is accurate, which we all know is vital when feeder fishing. However, due to the extra flex Nano material offers, the action is still non-locking when playing fish, which all Parabolix rods are renowned for. No matter how hard you pull, the rod will not lock up!

Not only have we improved each rods action, but we have also improved the tips that fit them. Each carbon tip supplied with the rods are now softer and more progressive, and much improved over conventional carbon material.

Each two-piece blank, is supplied with over-sized, Fuji guides and a Fuji reel seat. The unique rubberized handle ensures grip is never lost, no matter what the weather, and each rod is supplied a set of high-quality neoprene rod wraps, as well as a padded cloth rod bag.

- Nano carbon 2-PC blank
- Parabolix non -locking action
- Attractive Gold tippets on whippings
- Unique anti-slip rubberized handle design
- Oversized fuji guides
- Fuji reel seat
- Supplied with 0.5oz, 1.0oz and 1.5oz carbon tips
- Supplied with quality neoprene rod wraps
- Supplied in quality padded cloth bag
