SKIRTING & ARCHITRAVE

All patterns are illustrated as approximately full size.
All sizes stated are metric finished sizes.
All sections are subject to availability and come in different lengths depending on the timber required.

MR Mouldings also provide a
MADE TO MATCH
service which matches any profile required.

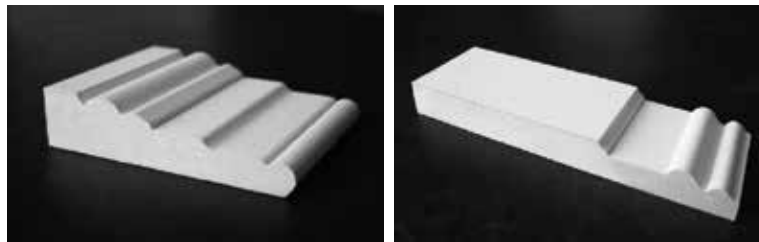

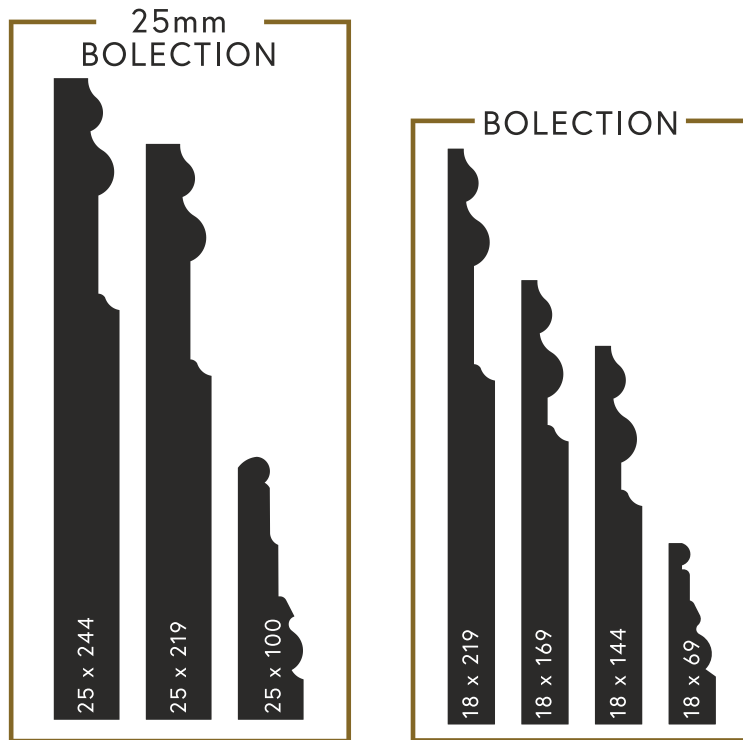

The Georgian style skirting board is a simple, yet elegant design that can effortlessly add a touch of sophistication to any room. These skirtings were designed to complement the neo-classical features of Georgian architecture.

Georgian skirtings are typically characterized by their simple profile, featuring flat sections of varying widths and a shallow ogee moulding at the top. The skirting height is typically between 150mm-220mm and at least 18mm thick. We craft them from either Softwood, Tulipwood or Moisture Resistant MDF and can transform any living space, adding a touch of classic minimalism. When used in combination with other period features like cornicing, panelled doors, and dado rails, the skirting provides a unique feel that transports you to the elegance of the 18th century.

Whether you are restoring a Georgian home or creating a timeless space, Georgian skirting is a perfect choice for adding character to your interior design.

MADE TO MATCH
service which matches any profile required.

The Bolection skirting is a unique style of skirting board that is often used in period properties and traditional settings.

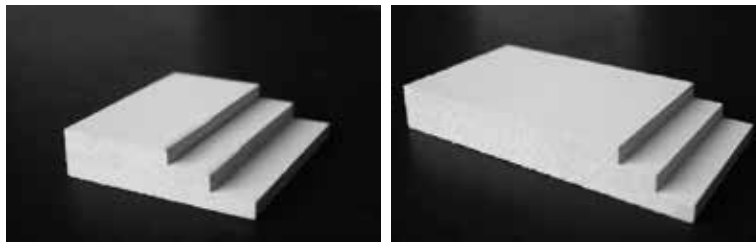

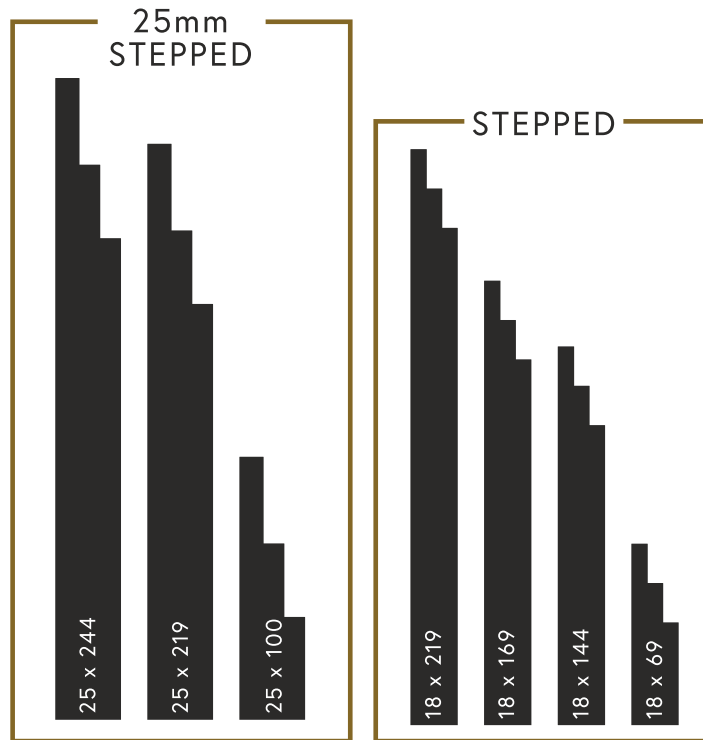

Its distinctive feature is the 'raised oval' shape that projects outwards from the flat surface of the skirting board. This creates a bold and elegant look, often used as a statement feature of a room.

Bolection skirting boards can be manufactured in various sizes, making them versatile for use in both large and small spaces.

We often make the bolection from high-quality timber such as Tulipwood. However, Moisture Resistant MDF has proven to be very popular in recent years.

As a timeless and elegant style of skirting board, Bolection skirting is a popular choice for designers and homeowners looking to add a touch of luxury to their home décor.

service which matches any profile required.

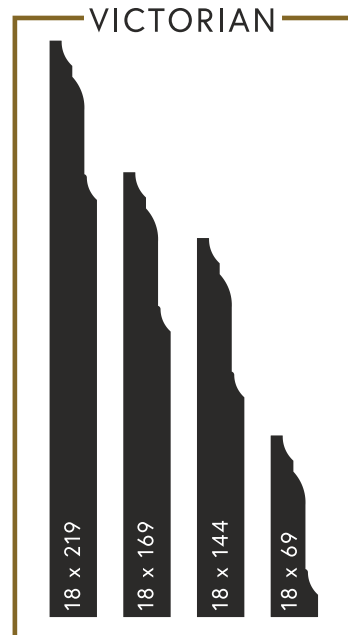

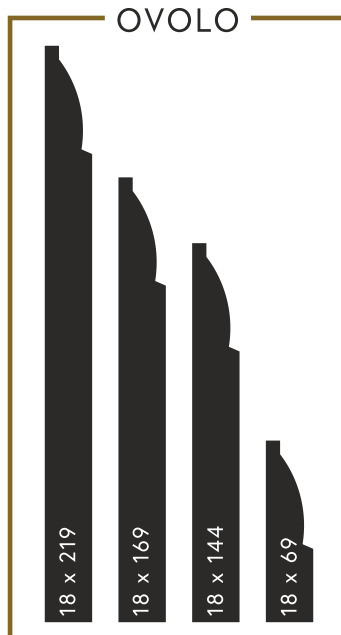

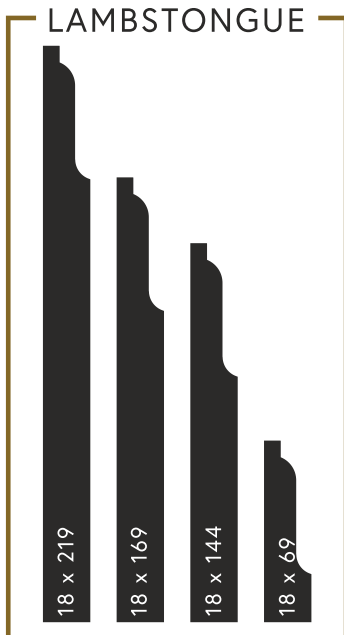

The stepped style skirting board is a contemporary design that adds a sleek and modern look to any room. These skirtings were designed to complement the clean lines and simplicity of modern architecture. Stepped skirtings are typically characterized by their stepped profile, featuring flat sections of varying widths and a stepped profile rather than moulding.

They often have a minimalistic design and can be supplied in a variety of heights and thicknesses. The skirting height is typically between 94mm – 244mm and at least 18mm thick. We craft them from either Softwood, Tulipwood or Moisture Resistant MDF and can transform any living space, adding a touch of minimalist elegance. When used in combination with modern features like plastered walls and contemporary doors, the skirting provides a unique feel that works well with many modern interior design schemes. Whether you are looking to update your home or create an up-to-date aesthetic, stepped skirting is an excellent choice for adding modernity to your interior design.

EXTRA WIDE

Timber and MDF window boards are popular choices for home decor and commercial construction. Timber window boards give a traditional and rustic look and feel to the interior of a building. Clocking in on durability, timber such as Pine or American White Oak works as a sturdy and long-lasting window board. Timber window boards also offer many choices in terms of styling options with finishes that can be varied in stains, varnish and mouldings.

MDF window boards are synthetic material produced by combining wood fibres and resin, in comparison to natural wood like timber. MDF window boards are cost-effective and perfect for those who want the timber look without any imperfections such as knots and splits.

Both timber and MDF window boards offer choices in thicknesses and can be cut to size to fit the required dimensions and provide flexibility during installation.

BESPOKE DOOR LININGS

- SUPPLIED UNASSEMBLED INCLUDING LOOSE DOOR STOPS
- AVAILABLE IN SOFTWOOD, HARDWOOD OR MDF
- PRIMING AVAILABLE
- GROOVED FOR INTUMESCENT STRIP IF REQUIRED
- QUICK TURNAROUND
- DELIVERED TO YOU OR DIRECT TO SITE

Door linings are essential for ensuring the stability, security, and aesthetic appeal of a building's interior design. Door linings also provide continuity within the room's decor, acting as a contrast or continuation of the room's design features. There are different materials out there that builders can use for door linings, but timber and MDF remain the most popular choices.

The primary benefits of door linings are their ability to provide a framework for the door and prevent it from becoming unstable or coming off its hinges. Door linings also contribute to the insulation by sealing the gap between the door and wall. Proper insulation makes a room warmer in the winter and cooler in summer, reducing energy costs and improving comfort.

Another significant benefit of door linings is the aesthetic appeal of the finished product. Door linings can provide a seamless visual flow from the floor to the ceiling that completes a walkway's overall look.

TIMBER CLADDING

- SPECIALIST IN MACHINED CLADDING TO SUIT EVERY NEED
- TIMBER AVAILABLE: WESTERN RED CEDAR, SIBERIAN LARCH, THERMOWOOD, TREATED SOFTWOOD
- PROFILES AVAILABLE: TGV, SHIPLAP, SHADOW GAP, SQUARE EDGED (PAR)
- QUICK TURNAROUND
- DELIVERED INTO BRANCH OR DIRECT TO SITE

Timber cladding is a popular choice for adding texture, warmth, and character to a building's exterior. There are various types of timber species available, and each has a unique look and feel. Western Red Cedar cladding, for example, has a natural reddish-brown colour that weathers to a silver-gray hue, while Siberian Larch cladding has a golden-brown colour that also weathers to a rustic silvery-gray hue. These materials are durable, sustainable, and environmentally friendly. Timber cladding is also effortless to maintain, requiring only periodic cleaning and oiling. Cladding can be used to add both horizontal or vertical emphasis to buildings, adding a modern architectural detail. It can also be used to insulate homes as timber has a high R-value-keeping homes comfortable all year round. An additional benefit is that timber cladding is a renewable resource, which means that it is harvested and replaced, ensuring minimal environmental impact. With a wide range of species to choose from and the above benefits, timber cladding is an excellent choice for adding value, beauty, and sustainability to any building.
