

# FASTPLUS

A Trademark of Herzallee GmbH

[fastplus.eu](http://fastplus.eu)

## Welcome to Fastplus Abrasives!

Fastplus originated from ABR Tools in Austria, the mother company has more than 30 years of coated abrasives production and OEM experience for some renowned brands in the industry. In order to serve our customers better, we found Herzallee GmbH as our sales branch in Germany to sell all Fastplus coated abrasive products to all European countries and the Oversea market.

Fastplus is growing fastly and becoming a trusted brand to sell factory-direct sanding, polishing and non-paint products online for the automotive repair applications, the uncompromising quality and competitive price make us stand out.

### Factory-direct

22-year manufacturer of sanding abrasives, factory direct price & premium quality, no-middleman, delivery direct to you.

### Car Expertise

Fastplus offers full collections of sanding and polishing solutions for car preparation, body-shop repair, finish protection.

### B2C Mode

Fastplus has stocks in Germany, for individual EU customers, place orders online, your payment is 100% secured.

### B2B Mode

Fastplus offers B2B mode, for wholesale customers, please consult with our professional team for make-to-order demands.

# Coated Abrasive Structure

① Size Coat    ② Mineral Grit    ③ Glue or Resin Bond    ④ Backing

## 1. Coated Abrasives

Coated abrasives, also known as flexible abrasives, are products that consist of a thin layer of abrasive grain attached to a substrate such as paper, cloth, etc. The substrate can have varying degrees of flexibility ranging from extremely flexible (E weight cotton backings) to extremely sturdy (Z weight polyester backings). These substrates are used as backings for different types of abrasives: rolls, belts, discs and sheet goods. Coated abrasives are manufactured using abrasive grains; the most common are aluminum oxide, zirconium, ceramic and silicon carbide. The crude grains are crushed and separated into sizes, called grit sizes, using calibrated screens. Grits range from 12 (very coarse) to 1200 (very fine). Once the grains are separated into sizes, they are attached to a backing material using various bond techniques. Compared with other grinding tools, coated abrasives have many advantages such as high dimensional grinding accuracy, low grinding surface roughness, high grinding efficiency and wide processing range.

## 3. Backing

### a. Paper-backing:

Specialized technical papers are used as substrates for coated abrasives. Paper backings come in different paper weights, designated by letters (A, B, C, D, E, F), are available for different applications.

**b. Cloth backing:** Cloth backings come in various weights, from Stiffest to the most Flexible - (Y, X, J, F)

**c. Film Backing:** Used most often for DA sanding discs for orbital sanders. The film backing is more durable than paper & can be used wet or dry.

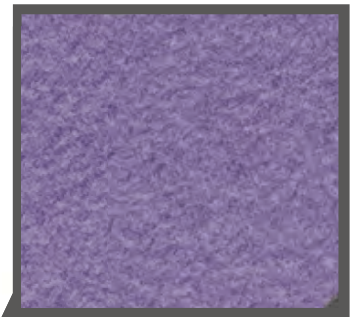

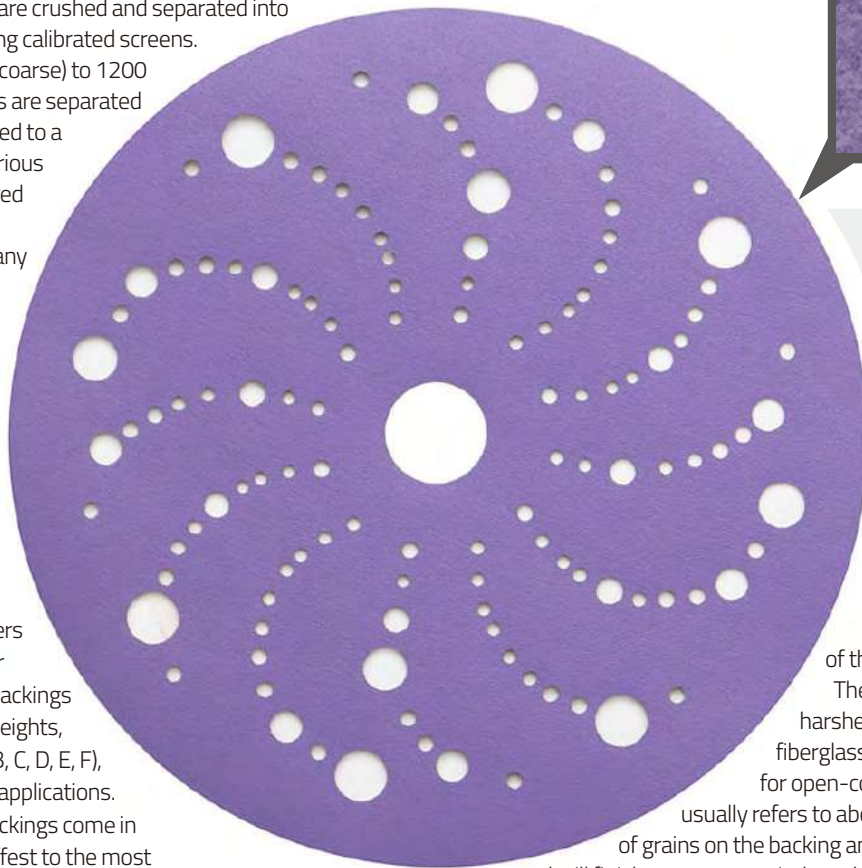

**d. Foam/Sponge Backing:** Foam backed abrasives provide an excellent option for sanding odd shapes, moldings, tight spaces and more. Abrasive sponges are flexible, waterproof and washable, meaning they can be reused, giving them a very long abrasive life.

**e. Other Backing Options:** There are other backings such as Non-woven, fiber and nylon, it depends on the tasks it will be used on.

## 2. Structure

A coated abrasive is made up of four to five different components:

1. Backing Material
2. Maker Coat
3. Abrasive Grain
4. Size Coat
5. Optional Coat

**Ceramic Grain** can be self-sharpening, the grains keep sharp during the life time. It cuts faster, lasts longer than other grains.

## 4. Coating Types

**Open coat:** The abrasive grains cover approximately 50% to 70% of the coated surface of the backing.

They offer greater flexibility, but are harsher cutting. Wood, soft metals and fiberglass sanding are typical applications for open-coat products. **Semi-open Coat:** it usually refers to about 30% reduction in the amount

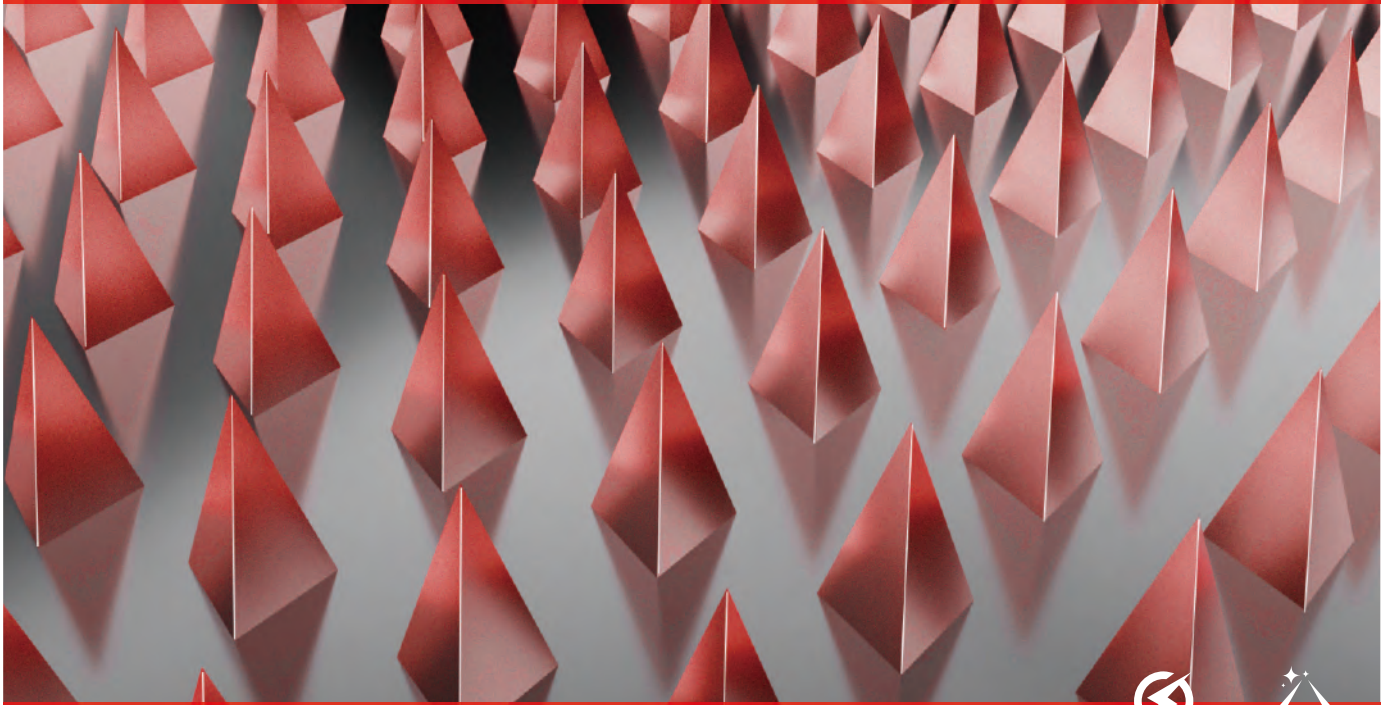

of grains on the backing and generally cuts less aggressive

and will finish coarser per grit than closed coat products. **Closed Coat:** The abrasive grains completely cover the coated surface of the backing. The greater number of abrading points per square inch causes faster stock removal during the use and produces a better finish than open-coat.

Grits Table	Extra fine				Fine	Coarse	Extra Coarse																				
	Micro Finish Sanding				Finish Sanding		Intermediate Sanding	Rough Sanding																			
FEPA	P2000	P1500	P1200	P1000	P800	P600	P500	P400	P360	P320	P280	P240	P220	P180	P150	P120	P100	P80	P60	P50	P40	P36	P30	P24	P20	P16	P12

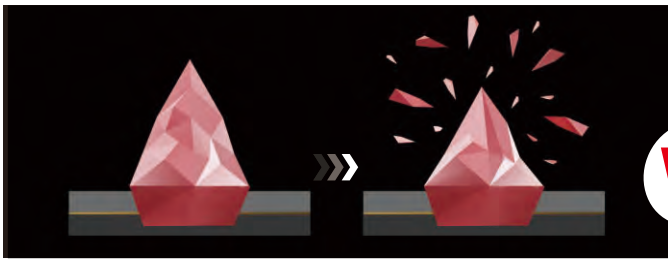

# Super Ceramic Grain: Faster Cutting, Longer Lasting

Shaped Ceramic Grain, Self-sharpening Character

 CUT FASTER

 LAST LONGER

## Fastplus: Self-sharpening Ceramic Grain

Fastplus "Self-sharpening" ceramic grain forms new cutting edges when the ceramic abrasive is broken to maintain continuous cutting and way more anti-clogging.

**VS**

## Conventional: Ploughing Action Grain

Conventional grains will only build up residue after crushing, creating a "ploughing surface" that generates more heat and can cause more clogging.

## Fastplus Optimum Triangular-shaped Ceramic Grain >>

Fastplus provide faster cutting speed, clean cutting action and cooling grinding temperature, which extending the life of the disc.

## Conventional Crushed Ceramic Grain >>

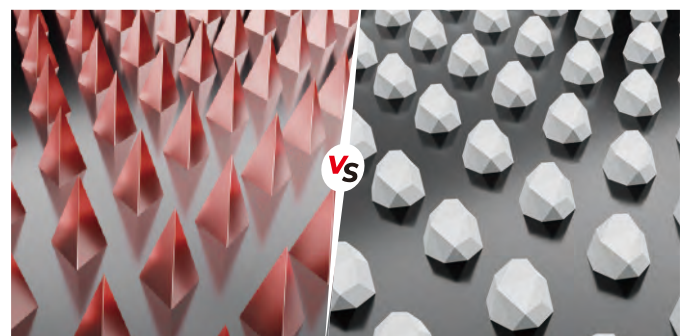

Conventional grains are irregularly lumpy, which results in generating excess heat during grinding

## « Fastplus Sharp Tip for Efficient and Smooth Cutting

Fastplus ceramic grain is hard and sharp enough for the surface to realize fast and efficient cutting.

## « Conventional Dull and Inefficient Grain

Conventional grains contacts the surface, it will become pulverized and dull, which greatly affects the grinding efficiency.

## CERAMIC SANDING DISCS

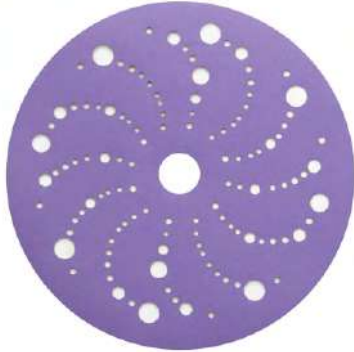

Multi-holes For All  
150mm Orbital Sanders

Fastplus PURO ceramic sanding discs have hook-and-loop system and made of premium ceramic minerals, the ceramic grain is sharper to speed up the sanding and more durable to reduce frequent changeovers.

Fastplus ceramic abrasive discs have **super high removal rate and 30% longer service life**. Highly recommended for auto-body use, wood sanding, sanding of bare metal, primer, primer surface between coats of paint and on solid surface countertops.

SHEETS

# BN38

## WET AND DRY S/C SANDPAPER SHEETS

Fastplus BN38 wet and dry sandpaper sheets is coated with premium Silicon Carbide Grains that are resin on resin bonded onto 30% latex-backed paper, which makes the sandpaper to achieve excellent waterproof ability.

- Silicon Carbide Grain, Extremely Long-lasting
- Quality Latex-Backed C-weight Paper
- Waterproof, Use Wet and Dry Conditions
- Fast cutting and very resistant to clogging
- Grit Range Allows for Sharp Cut to Very Fine Finish
- Resists Heat with Great Grain Adhesion
- Best to be used with lubricants
- Closed coat structure for more material removal

## SPOT REPAIR DISCS

### FD8 | 32MM PSA FILM

FD8 Spotfix Film Disc is ideal for spot repair which is used to correct small paint defects, polish small areas with extreme precision, and remove dust particles on glazes and clear coat.

The spot repair discs are backed with PET film that is durable for heavy-duty polishing and suitable for wet sanding. The Spotfix film discs are PSA-backed with sticky pressure-sensitive adhesive which allows fast-change for easily using.

FD8 Spot repair discs are made of premium silicon carbide grain and come with grits options: P2000, P3000, and P5000 which deliver superfine finishing results, the Spotfix film discs are widely used at car plants in the finessing- and hospital areas of the paint shops, also used in the automotive refinish processes.

# EMT1

## SOFT EDGE FOAM MASKING TAPE

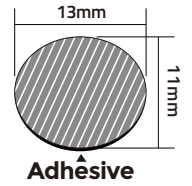

13mmx50m

Fastplus soft edge foam masking tape EMT1 provides an easy and fast way to mask door jambs, hoods, trunk lids, and other apertures while being painted, preventing paint overspray from entering those areas. The foam tape provides a soft edge which allows the paint to transition gradually into the foam to prevent hard paint lines. The formulated adhesive is easily removed without residue and allows for repositioning while not perfectly positioned. This 13mmx50m (1/2"x 54 yards) soft-edge foam masking tape is ideal for automotive restoration and paint work.

**Technical Details**

- Model:** EMT1 Foam Masking Tape
- EAN:** 611135000016
- Roll Size:** 13mmx50m (1/2"x 54 yard)

# H&K BACKING PADS FOR ORBITAL SANDERS

Fastplus Backing pad is a perfect attachment that matches with 150mm hook-and-loop sanding discs and all commercially available orbital sanders. The sanding disc backing pad provides adequate cushioning for the highest sanding performance, increases abrasive discs' flexibility, and reduces wear and the risk of ergonomic injuries. Backing pads also help ensure the disc's maximum surface area is available for the project and the pressure is more evenly distributed, which provides the most even finish.

- **Multihole Backing Pad:** Fastplus backing pad is made into a multi-hole pattern which ensures compatibility with the hole pattern of sanding discs most commonly found in the market.
- **Swirl-free Backing Pad:** Fastplus back pad combines oscillation with its rotation, which helps to produce a swirl-free finish.
- **Hook-and-loop Backing Pad:** The sanding discs can be kept in place firmly and easily on the backing pad by means of a hook-and-loop fastener, and the abrasive discs can be changed or removed with ease by hand.
- **Dust-free Backing Pad:** the perforated pad with multiple vacuum holes provides a dust extraction option that enables orbital sanders to extract dust during sanding or polishing and keeps the workstation and the air clear from dust.
- **Sander-compatible Backing Pad:** Fastplus backing pads are compatible with all 150mm sanders and polishers with an M8 or 5/16" threaded shaft, such as orbital sanders or polishers from Mirka, Makita, Rupes, Bosch, Dewalt, and other main brands.

## FBP1 150MM BACKING PAD

# H&K INTERFACE PADS BETWEEN DISC AND BACKING PAD

Fastplus Interface Pad is expertly designed to fit seamlessly between the backing pad and sanding disc, allowing for greater flexibility and cushioning for contour and close-edge sanding. The interface pad reduces over-sanding high spots, increases abrasive cut, and enables more consistent contact of abrasive discs around surface contours, resulting in a perfectly fine and smooth finish. This remarkable interface pad is compatible with all types of sanding discs with dust collection holes, the hook and loop backing makes pad changes quick and easy.

- Reduces vibration from orbital sanders for improved results
- Provide extra cushion for precision sanding
- Ideal for use with flexible film and foam sanding discs, also works perfectly with standard hook and loop sanding discs
- Applies effortlessly between H&K sanding discs and H&K backing pads for quick changeouts
- Universal hole pattern fits most sanders and helps clear dust, increasing disc life

## FIF1 150MM INTERFACE PAD

**Model:** FIF1 Interface Pad  
**Size:** 150mm (6")  
**Type:** Hook-and-loop  
**Material:** Foam/Sponge 10mm  
**Density:** Soft  
**Perforation:** 17H, multi-hole pattern for sanding discs with 6 holes, 6+1 holes, 8 holes, 15 holes, 17 holes and multi-holes  
**Fastening:** Self-fastening for all standard orbital sanders  
**Color:** Black Hook + Red Loop
