

End Molding

Installation: Glue - Glues down to complete the end of the flooring.

Purpose/Application: This transition is used where your hardwood flooring meets carpet, or in areas where you need to cover the expansion gap but cannot use wall base or quarter round. It can also be used at sliding glass doors, around fire place hearths, and next to other hard surfaces such as ceramic tile. You can also cut off a portion of the angled section to match the height of other materials like ceramic tile.
