Instructions for use

Quintet and Duet Power Centers

Introduction

Owner's Reference Quintet and Duet Power Center

Important Safety Instructions

**Read these instructions
Heed all warnings
Follow all instructions**

WARNING. TO REDUCE THE RISK OF FIRE OR ELECTRICAL SHOCK, DO NOT EXPOSE THIS APPARATUS TO RAIN OR MOISTURE.

Clean only with a dry cloth.

Do not place flammable material on top of or beneath the component.

All PS Audio components require adequate ventilation at all times during operation. Rack mounting is acceptable where appropriate.

Do not remove or bypass the ground pin on the end of the AC cord unless absolutely necessary to reduce hum from ground loops of connected equipment. This may cause RFI (radio frequency interference) to be induced into your playback setup. All PS products ship with a grounding type plug. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.

Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus. Unplug this apparatus during lightning storms or when unused for long periods of time.

When making connections to this or any other component, make sure all components are off. Turn off all systems' power before connecting the PS Audio component to any other component. Make sure all cable terminations are of the highest quality.

There are no user serviceable fuses inside this product.

THERE ARE NO USER-SERVICEABLE PARTS INSIDE ANY PS AUDIO PRODUCT. REFER ALL SERVICING TO QUALIFIED SERVICE PERSONNEL

Please contact your authorized dealer, distributor, or PS Audio if you have any questions not addressed in this reference manual.

PS Audio® is a registered trademark of PS Audio International Inc., and is restricted for use by PS Audio International, Inc., its subsidiaries, and authorized agents.

The exclamation point within a triangle is intended to tell the user that important operating and servicing instructions are in the papers with the appliance.

The lightning flash with arrowhead within a triangle is intended to tell the user that parts inside the product are a risk of electric shock to persons.

Introduction

Owner's Reference Quintet and Duet Power Center

Thank you

Thank you for your purchase of a PS Power Center.

Both the Duet and Quintet Power Centers are state-of-the-art high-end power centers that provide component level AC cleaning and protection in a compact package. The Duet offers 4 outlets and 2 independent isolated zones, while the Quintet provides 10 outlets and 5 independent isolated zones. Both units provide true surge and spike protection, over and under voltage protection and both differential and common mode AC filtering.

Dynamics never restricted

The PS Power Centers will not restrict dynamics or soundstage in any high-end system and will, in fact, provide a superior level of performance in micro and macro dynamics as well as maintain harmonic integrity for audio equipment while increasing color saturation and lowering video noise in video equipment.

Nano Crystalline

The PS Power Centers utilize a new magnetic filtering technology based on wound inductors built from strips of Nano Crystalline high permeability soft magnetic material. This material has approximately 10 times higher permeability than any other magnetic materials ever produced. High permeability magnetic core materials allow PS Engineers to use a minimal amount of copper wire to build effective filters, thus preserving micro and macro dynamics for both audio and video systems.

Built to the highest standards

PS Power Centers are built to the highest standards internally and externally and feature ¼ inch thick solid copper power bars, heavy extruded aluminum covers and nickel plated, hand polished Power Port AC receptacles as standard equipment.

PS Power Centers should provide years of trouble free performance for your connected equipment with the peace of mind they will be fully protected.

Getting Started

Owner's Reference Quintet and Duet Power Center

Location

Once your new Power Center is unpacked, you'll need to find a convenient place to set it.

Mounting

There are several ways to mount the Power Center: on the floor, on a shelf, or in a rack. If you mount it on the floor, it can either lay flat on its bottom, or be placed at an angle between the floor and the wall. Note the Power Center is shaped in a truncated triangle on the bottom to facilitate placing it in an angled position.

If your equipment is located a long distance from the Power Center, it is preferable to use a long, heavy gauge shielded power cable between the wall AC receptacle and the Power Center, rather than long individual power cables between the equipment and the Power Center.

Isolation

The Power Center can benefit from aftermarket isolation devices such as cones, spikes and Sorbothane pads.

Once you have chosen the location for the Power Center you can use the supplied AC power cord to connect it to the AC wall receptacle or you can use an aftermarket power cord and receptacle.

Power Cables

We strongly recommend the use of a PS Audio xStream Power™ AC cable and a PS Power Port™ AC receptacle, or Soloist AC receptacle to feed the Power Center electricity. While the supplied power cable is adequate for the task, it is not going to provide the best performance. Choosing any xStream Power cable will make a significant performance improvement over the stock power cable.

Conditioners

We recommend the use of a PS Soloist in-wall conditioner to feed this device. We do not recommend connecting any other power conditioning product before the Quintet or Duet.

Quick Start Guide

Owner's Reference Quintet and Duet Power Center

Power down first We would recommend that you power the entire system down before attempting to connect equipment to the Power Center.

Plug in the Power Center Plug the Power Center into an AC receptacle with at least 15 amps of service (in the US) or 7.5 amps of service (in 220 volt countries), preferably using a dedicated AC line. A dedicated line means there is nothing else plugged into the wiring feeding the AC receptacle and that wiring returns directly to the AC breaker box.

Where you plug it in is important Our first recommendation on where to connect your new Power Center would be a PS Soloist in-wall device. The Soloist provides the first stage of cleaning and protection in the PS Power System and is an elegant in-wall solution. Our second choice is a PS Power Port AC receptacle. While not as good as a Soloist (the Power Port has no cleaning or protection capabilities) it is certainly preferable to a \$1.99 "contractor special" brass contact AC receptacle found in most of our homes.

Use the heaviest gauge shielded cable possible Use the heaviest gauge shielded AC power cable you can to connect a Power Center to its AC source. The heavier the gauge used, the less the chance for restricted dynamics in both audio or video systems. The PS logo light will blink when you first power the Power Center. This is normal.

IsoZones™ Once the Power Center has been connected to an AC source it is time to connect your equipment. Each Power Center has multiple isolated zones called IsoZones™. These are individually isolated and filtered zones that clean and isolate the power between equipment. The Duet has two IsoZones™ with two receptacles per zone and the Quintet has five IsoZones, with two receptacles per zone. Each IsoZone is clearly marked and you can attach up to two components per IsoZone.

IsoZones should be used to isolate different genres of equipment from each other. For instance, you can group digital equipment together on a single IsoZone or multiple analog sources on yet another IsoZone. You should not mix digital, video or analog equipment on the same IsoZone if possible. Digital equipment would be a DVD player, CD player, DAC, computer, TIVO, or satellite receiver. Video equipment would be a VCR, TV or computer monitor. Analog examples would be a power amp, preamp, projector, turntable, or any type of tube equipment. On the Quintet, IsoZone 5 is labeled Power Amp. It is no different than any of the other 4 IsoZones, other than it is a single duplex receptacle to keep the heavy current draw of power amps from affecting more sensitive source equipment.

It is important to use only the highest quality AC power cords that are well shielded to any connected equipment. It is a good idea to keep in mind that all equipment generates radiated noise when it is operating. This radiated noise is harmful to both audio and video system performance and is typically carried down the AC power line.

Power Zones The Quintet has selectable Power Zone switching. Set the IsoZones for proper operation. Each of the 5 IsoZones on the Quintet are controlled by one of three Power Zones labeled A, B and C. **A** controls IsoZones 1 and 2, **B** controls IsoZones 3 and 4 and **C** controls IsoZone 5 (labeled Power Amp).

Each of the three Power Zones can be set to one of the three positions: always on, switched and delayed.

Always on

Always on. The power button (PS blue logo) or DC triggers will have no effect on any Power Zone switched to this position. Anything plugged into a receptacle will be immediately connected to the AC power. Use this setting for equipment you never want to turn off from the Power Center's main power button. Examples would be a computer or a TIVO (so it can record a preset program when the system is shut off) or another piece of equipment used for a trigger voltage.

Switched

Switched. The power button on the Power Center (PS blue logo) or the DC triggers will activate or deactivate any equipment plugged into a receptacle set to "switched". This is the standard default and recommended switch setting for any source equipment plugged into the Power Center.

Delayed

Delayed. After the power button is pressed or the trigger is activated on the Power Center, these outlets will be delayed by 3 seconds before turning on. Use this setting for power amplifiers or any equipment that should turn on after the Power Center is activated.

DC triggers

DC triggers on the Quintet are used to remotely turn on and off the Quintet Power Center. These will accept any voltage from 5 to 15 volts. If your equipment produces a DC trigger voltage, use this input to control the Power Center. Or, you can provide your own voltage for the DC trigger with a 12 volt DC converter (wall wart) to activate the Power Center's trigger.

CATV and phone

The CATV and telephone protection inlets found on the Quintet are high quality, no-loss in/out paths for protection. The CATV connectors can accommodate two sources such as a cable TV or a satellite or antenna feed. Placing the video signal through these pass through connectors will help make sure everything connected is safe from spikes and lightning. The same applies for the telephone connections. These are used as in/out pass throughs for a phone.

How to turn it on

Once everything is connected you can press the blue PS logo light which will act as the on/off power button if you are not using the DC triggers. When you first power the Quintet or Duet Power Center, the blue PS logo light will blink as the unit calculates the proper AC voltage.

Should the unit sense voltages out of the wall that are either too high or too low, the Power Center will shut down and disconnect all connected equipment. In this case, you will see the blue PS logo flashing on and off rapidly, indicating the condition. Once the power has returned to its proper range of voltage, the Power Center will wait a few seconds and then reconnect the equipment automatically.

Should the unit be on all the time?

The Power Center is best left plugged in to the AC source at all times. The current draw is negligible and keeping it powered on will make sure the internal components stay working properly.

Are there any internal fuses?

There are no user replaceable internal fuses inside the Power Center. There is an externally accessible circuit breaker right next to where the AC plug is connected to the Power Center. Simply push the button on the circuit breaker should it be tripped. The components inside the Power Center have lethal voltages when powered and even when un-powered. Capacitors inside the Power Center can retain an electrical charge after the unit has been powered down. Do not attempt to get inside the unit for any reason unless instructed to do so by your dealer or an authorized service representative. Should the Power Center cease to function, check the circuit breaker and if that fails, contact your dealer or PS Audio's service center for help.

Placement?

Placement of the Power Center is not critical. Placement with respect to other equipment can be important. In general, place the Power Center close to the equipment you wish to power. It is always preferable to have a long heavy gauge power cable feeding the Power Center if there is a distance problem.

Isolation?

Isolation through the use of spikes, cones or Sorbothane feet is recommended for the Power Center if space and budget allows. Isolation of any piece of high-end stereo and theater equipment is always recommended wherever practical.

Do cables make a difference?

Yes, cables make a difference. It is important to use the best power cables possible. Remember that everything you see and hear in an AV system is nothing more than the power from the wall modulated by a CD, DVD, turntable or tuner. You are actually "listening or viewing" the AC power. So it is critically important to connect your equipment with the heaviest gauge well shielded power cables you can afford. Power is the foundation of everyone's system.

Power switch?

The master power switch for the Power Center is found on the AC inlet of the Power Center. Look for the company logo and press it.

Can I make my own DC trigger?

You can build your own DC trigger using any switched outlet. Switched outlets can be found in most homes and on most receivers and some preamps. Purchase a 12 volt DC power supply like those used to power games, remote speaker systems and small electric tools. It is unnecessary to have a lot of current (power) to operate

the trigger, and any voltage between 5 and 15 will do fine.

Is there something special about the Power Amp receptacle?

You do not have to use the Power Amp IsoZone on the Quintet for a power amp. It is marked like this for convenience.

All IsoZones are identical in build and all use our new Nano Crystalline soft magnetic material to clean the AC power.

You can plug the Control Center into a 15 amp or 20 amp receptacle without any problems (half of that current in 220 volt countries).

What does it mean if the logo power button is flashing?

If the blue logo power button blinks when you first plug in the Power Center to an AC receptacle, this is normal. The unit is calculating the voltage being fed to it. A fast blinking logo power button means there is an over or under voltage situation and the unit has shut off. This occurs at 130 (260) volts on the high side and 100 (200) volts on the low side. The Power Center should automatically turn back on when the voltage on the line has returned to normal. If it does not, simply press the logo power button to reactivate the Power Center.

What if it flashes slowly?

If the logo light flashes slowly, it means the voltage has exceeded 125 (250) on the high side or dropped below 105 (210) volts on the low side. The blinking only indicates a potential problem. There is no harm in running most equipment at these higher and lower voltages.

Will it work on other voltages?

The Power Center is specific to your country's voltage. Do not use the Power Center on a voltage higher than it is rated for. For instance, do not take a 120 volt rated Power Center and attempt to use it in a 230 volt country. Failure to observe this cautionary note will void your warranty and may damage the Power Center. If you need to operate the Power Center at a voltage other than the voltage it was designed for, contact your dealer, distributor or the factory.

Power Center won't turn on

If no power comes out of the Power Center, check to make sure power is going into the Power Center. You can do this by testing the outlet it is plugged into with another device such as a lamp. Sometimes, we find Power Centers plugged into switched wall outlets. These are typically the lower of the two AC receptacles and are controlled by a light switch. If you have no power to the receptacle, check the circuit breaker feeding the receptacle.

Check the logo

If you have verified there is power to feed the Power Center, check the Power Center's blue PS logo to see if it is lit. If not, press the logo itself. This is the power button. Check and make sure there are no connections to the triggers. Pull them out if there are. If the logo does not light, check the circuit breaker next to the AC inlet on the Power Center. Press the circuit breaker to activate.

Use the correct voltage

Lastly, make sure you are feeding the Power Center the correct voltage. The Power Centers are specific to your country's voltage. If, for example, you are trying to operate at 120 volt Power Center on 220 volts, it will not turn on. If all else fails, contact your PS dealer, distributor or PS directly for help.

If the power light blinks

If the blue logo power button blinks when you first plug in the Power Center to an AC receptacle, this is normal. The unit is calculating the voltage being fed to it.

Fast blinking vs. slow blinking

A fast blinking logo power button means there is an over or under voltage situation and the unit has shut off. This occurs at 130 (260) volts on the high side and 100 (200) volts on the low side. The Power Center should automatically turn back on when the voltage on the line has returned to normal. If it does not, simply press the logo power button to reactivate the Power Center.

If the logo light flashes slowly, it means the voltage has exceeded 125 (250) on the high side or dropped below 105 (210) volts on the low side. The blinking only indicates a potential problem. There is no harm in running most equipment at these higher and lower voltages.

If you have to replace the AC module

If your dealer or distributor instructs you to replace the AC inlet on a Power Center, you must first remove the screws holding it in. These are the only screws found on the bottom of the unit. Remove the screws then pull out the AC inlet. The AC inlet module has the spike and surge protection, a differential mode filter and all the communication bus necessary to operate the Power Center. This should never be necessary under normal conditions.

If the trigger isn't working

If the trigger circuit is not working, check to make sure you are feeding it proper voltage. The trigger circuit requires 5 to 15 volts positive. You can test the trigger circuit with a simple 9 volt battery. Connect the minus of the battery to the outer ring of the trigger input mini jack and the plus to the "tip" or center of a male mini jack. The 9 volt battery will provide the proper voltage to operate the trigger. When power is applied, the Power Center will turn on. When power is removed, the Power Center will turn off.

If you have hum

If you experience a hum through the speakers once the Power Center is powering your equipment this can be caused by several things. The first is the source. If there is an excessive amount of buzz or noise from the loudspeaker, it may be caused by a ground loop, a light dimmer in the home, poor AC power, or any number of causes. The quickest way to determine where to start your search is to simply turn the preamplifier, integrated, receiver or Control Amplifier off, disconnect the audio cables between it and the sources, and see if the hum goes away when you turn the preamplifier, integrated, receiver or Control Amplifier back on. If it does, it's most likely a ground loop or buzz from a dimmer.

If this doesn't solve the problem, follow these easy humbusting tips.

The easiest way to figure out where ground loop problems lie is by the process of elimination. You need to determine where the hum or buzz is coming from within your system.

If the hum/buzz goes away when you remove the inputs to the power amp, your next step will be to reconnect the amp and move further down the chain. If you were working with a receiver or an integrated amplifier, you will need to jump to step 4. If you have a preamp, or processor that is feeding the power amp, your next step would be to disconnect all inputs to the preamplifier or processor. Once

Troubleshooting

Owner's Reference Quintet and Duet Power Center

these are disconnected, and the preamp or processor is connected only to the power amplifier, turn the system on and again, listen for hum. Should the hum now appear, it is a problem with your preamp or processor or their interaction with the power amp. Before returning the preamp or processor to the manufacturer, try a cheater plug to break a ground loop. Cheater plugs are simple devices that convert a three prong AC plug into a two prong AC plug and in the act of converting three prongs, to two prongs, they disconnect the ground from the wall socket. Try one of these on the preamp, or the power amp, or both.

If you determine that there is still no hum present when the preamp, processor or receiver is connected with no inputs, then selectively begin plugging in your various inputs one at a time. After each connection, check for hum until you discover the humming culprit.

It could be the cable TV

VCR's, surround processors, and any device that is connected to a television cable or satellite dish can cause a loud buzz and should always be suspect. If, by the process of elimination described above, you determine it is a component like a VCR that is causing the hum/buzz to occur, and using a cheater plug or removing the ground pin on a PS xStream Power Cable doesn't help matters, it may be necessary to isolate the cable connection (CATV) with an isolation transformer. This inexpensive device is available at most Wal Mart, Radio Shack or department store type outlets and is sometimes called a 'matching transformer'. If you have problems finding one, call your local cable TV company for advice. The matching transformer will be placed between the cable TV cord and the VCR, TV or processor.

Just remember, take the system down to its simplest level of connection. Find a way to hook the system up with as many pieces of the system missing or not connected. Keep it simple and get it to the point where the hum's gone. Then start adding back components one at a time until the hum returns.

Finding the problem is 9/10th of the work in finding a solution.

Warranty

Owner's Reference Quintet and Duet Power Center

TERMS AND CONDITIONS

PS Audio warrants the product designated herein to be free of manufacturing defects in material and workmanship, subject to the following conditions, for a period of 90 days from the date of purchase by the original purchaser or date of shipment to the authorized PS Audio dealer, whichever comes first. This warranty period can be extended to three (3) years by registering your product. To register, go online www.psaudio.com.

Conditions

This Warranty is subject to the following conditions and limitations: the Warranty is void and inapplicable if the product has been used or handled other than in accordance with the instructions in the owner's manual, abused, or misused, damaged by accident or neglect or in being transported, or the defect is due to the product being repaired or tampered with by anyone other than PS Audio or an authorized PS Audio repair center.

- a. The product must be packaged and returned to PS Audio or an authorized PS Audio repair center by the customer at his or her sole expense in the original packing material. PS Audio will pay return freight of its choice for original purchasers.
- b. Return Authorization Number (RA Number) is required before any product is returned to our factory for any reason. This number must be visible on the exterior of the shipping container for PS Audio to accept the return. Units shipped to us without a Return Authorization Number or without a visible RA Number on the exterior of the shipping container will be returned to the sender, freight collect.
- c. RETURNED PRODUCT MUST BE ACCOMPANIED BY A WRITTEN DESCRIPTION OF THE DEFECT.

PS Audio reserves the right to modify the design of any product without obligation to purchasers of previously manufactured products and to change the prices or specifications of any product without notice or obligation to any person.

Remedy

In the event the product fails to meet this Warranty and the above conditions have been met, the purchaser's sole remedy under this Limited Warranty shall be to return the product to PS Audio or an authorized PS Audio repair center where the defect will be repaired without charge for parts or labor.

This Warranty is for the benefit of the original purchaser of the covered product if the product has been purchased through an authorized PS Audio dealer, distributor or agent. PS Audio will not honor this warranty without valid proof of purchase from an authorized PS Audio dealer, distributor or agent and or a valid serial number as proof the product is a valid PS Audio product manufactured by PS Audio International.

This warranty does not cover the cost of custom installation, customer instruction, setup adjustments or signal reception problems.

Miscellaneous

This warranty does not cover cosmetic damage or any damage due to accident, misuse, abuse, negligence or modification of, or to any part of the Product, without initial express consent from PS Audio. This warranty does not cover damage due to improper operation or maintenance, connection to improper voltage supply, or attempted repair by anyone other than a facility

Warranty

Owner's Reference Quintet and Duet Power Center

authorized by PS Audio to service the Product.

This warranty is invalid if the factory applied serial number has been altered or removed from the Product.

This warranty is invalid if proof of manufacture by PS Audio International cannot be determined to the satisfaction of the company either by verification of a valid serial number and or a valid receipt that includes the serial number from an authorized PS Audio dealer, distributor or agent.

To locate the servicer or dealer nearest you, or for service assistance or resolution of a service problem, or for product information or operation, call or email PS Audio.

ANY IMPLIED WARRANTIES RELATING TO THE ABOVE PRODUCT SHALL BE LIMITED TO THE DURATION OF THIS WARRANTY. THE WARRANTY DOES NOT EXTEND TO ANY INCIDENTAL OR CONSEQUENTIAL COSTS OR DAMAGES TO THE PURCHASER. Some states do not allow limitations on how long an implied warranty lasts or an exclusion or limitation of incidental or consequential damages, so the above limitations or exclusions may not apply to you. This Warranty gives you specific legal rights, and you may also have other rights that vary from state to state.

Inquiries regarding the above Limited Warranty may be sent to the following address: PS Audio International, Inc., 4826 Sterling Drive, Boulder, Colorado 80301 ATTN: Customer Service; Email: customerservice@psaudio.com; Voice 720-406-8946; FAX: 720-406-8967.

Outside the US

PS Audio has authorized distribution in many countries of the world. In each country, the authorized importing retailer or distributor has accepted the responsibility for warranty of products sold by that retailer or distributor. Warranty service should normally be obtained from the importing retailer or distributor from whom you purchased your product. In the unlikely event of service required beyond the capability of the importer, PS Audio will fulfill the conditions of the warranty. Such product must be returned at the owner's expense to the PS Audio factory, together with a photocopy of the bill of sale for that product, a detailed description of the problem, and any information necessary for return shipment.

If you require service in North America

In the unlikely event there is a problem with your PS Audio component, please contact your dealer, distributor, or the PS Audio corporate research center to discuss the problem before you return the component to our California manufacturing facilities for repair. Products shipped to either the factory or the corporate research facilities will be refused and returned freight collect if not accompanied by a PS Audio Service Department issued return authorization number (RA Number).

Obtain an RA number

Return authorization numbers must be prominently displayed on the outside of the box and an accompanying letter describing the problem and re-listing the RA number must be inside the box to qualify for service.

Contact information

To contact the PS Audio Service Department:

TELEPHONE 866-406-8946 (toll Free)
HOURS M/F 9:00 am to 5:00 pm MST
FAX 720-406-8967
E-MAIL service@psaudio.com
WEBSITE <http://www.psaudio.com>

If you are in the United States or Canada

If you are in the United States or Canada use the following procedure:

1. Obtain a Return Authorization Number (R/A number) and shipping address from the PS Audio Service Department.
2. Insure and accept all liability for loss or damage to the product during shipment to the PS Audio factory and ensure all freight (shipping) charges are prepaid.

The product may also be hand delivered to the California or Colorado facilities if arrangements with the Service Department have been made in advance. Proof of purchase from an authorized PS Audio dealer, distributor or agent will be required for warranty validation at the time of hand delivery.

Use original packing

Use the original packaging to ensure the safe transit of the product to the factory, dealer, or distributor. PS Audio may, at its discretion, return a product in new packaging and bill the owner for such packaging if the product received by PS Audio was boxed in nonstandard packaging or if the original packaging was so damaged to the point it was unusable. If PS Audio determines that new packaging is required, the owner will be notified before the product is returned.

To purchase additional packaging, please contact your authorized PS Audio dealer, distributor, or the PS Audio Service Department for assistance.

If you are outside the US or Canada

If you are outside the United States or Canada and require service you must contact your country's dealer or distributor for instructions. PS Audio warrants its products (see warranty section) worldwide. Service for PS Audio products outside the United States and Canada is handled through your country's distributor or dealer.

1. Obtain a Return Authorization Number (R/A number) and shipping address from your dealer or distributor's Service Department.
2. Insure and accept all liability for loss or damage to the product during shipment to the dealer or distributor's Service Department and ensure all freight (shipping) charges are prepaid.

If you have problems

If you feel your country's authorized dealer or distributor is either unwilling or unable to service your PS Audio products, please contact our service department at service@psaudio.com or at the above contact numbers to discuss the situation.

Voltage changes

Voltage changes to match your country's voltage and frequency requirements to your PS Audio product are possible only at the time of purchase. The GCA amplifier series is set to a fixed voltage to match your country's requirements and may not be changed.

Your serial number

Your PS Audio product serial number is:

Please fill in the dealer or distributor's information from where you originally purchased the unit.

Your purchase information

Date of purchase
