

## The Sock Monkey® 18/12 QUICKSTART GUIDE

The Sock Monkey 18/12 features a slightly larger cabinet that holds a 12" Celestion Greenback and a new larger output transformer for closer to 18 watts and more headroom. It runs 2x EL84 output tubes and 3x 12AX7 preamp tubes. The Pull BOOST on the volume control allow many tonal possibilities. This is our decidedly British sounding combo, it's tone is in between a AC-15 and an 18 watter with more gain.

### **VOLUME (Pull Boost)**

The VOLUME manages the loudness of the pre-amp and you can pull out the knob for an extra stage of gain.

### **TREBLE**

Acts on the overall high end.

### **BASS**

Acts like a global low frequency control.

### **MASTER**

Controls the overall volume.
