Kara Pure Features

Step 0: Easiest Unboxing Method

- **For the best unboxing experience, we highly recommend following the unboxing video below.**

https://youtu.be/ioxfnZPxhe4

DO NOT THROW AWAY YOUR PACKAGING! YOU WILL NOT ELIGIBLE FOR A RETURN OR REFUND IF YOU DO NOT RETAIN YOUR ORIGINAL PACKAGING
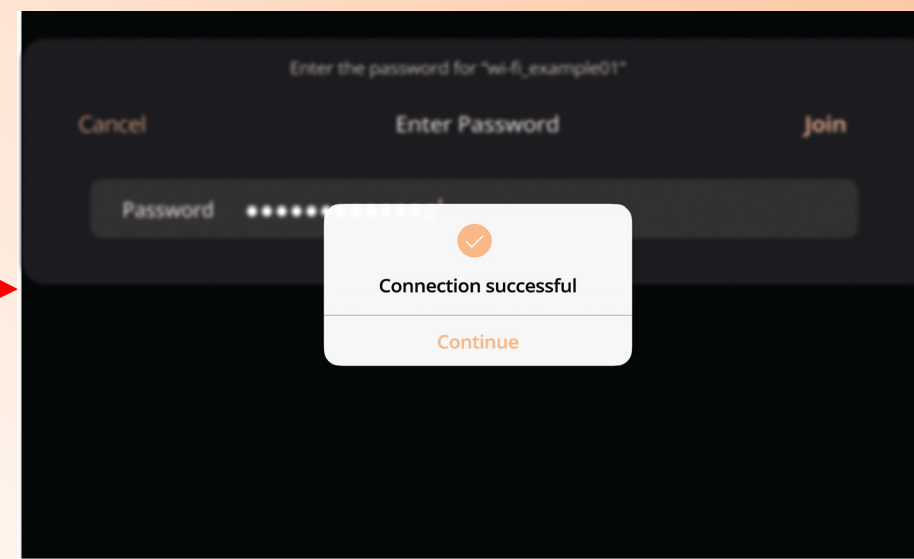

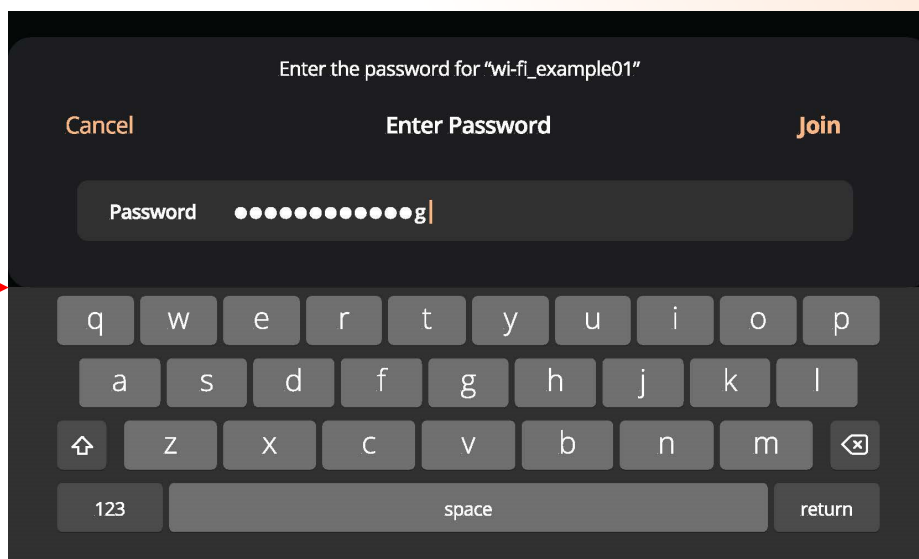

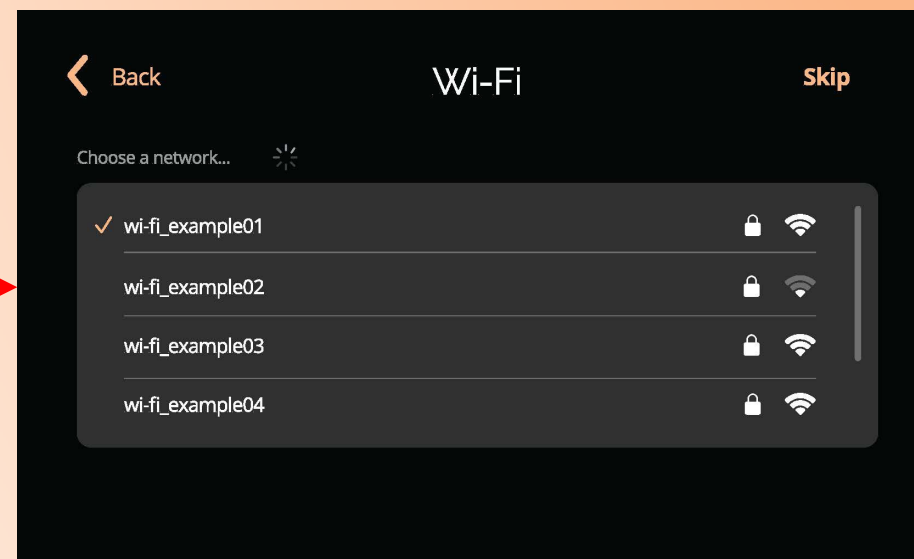

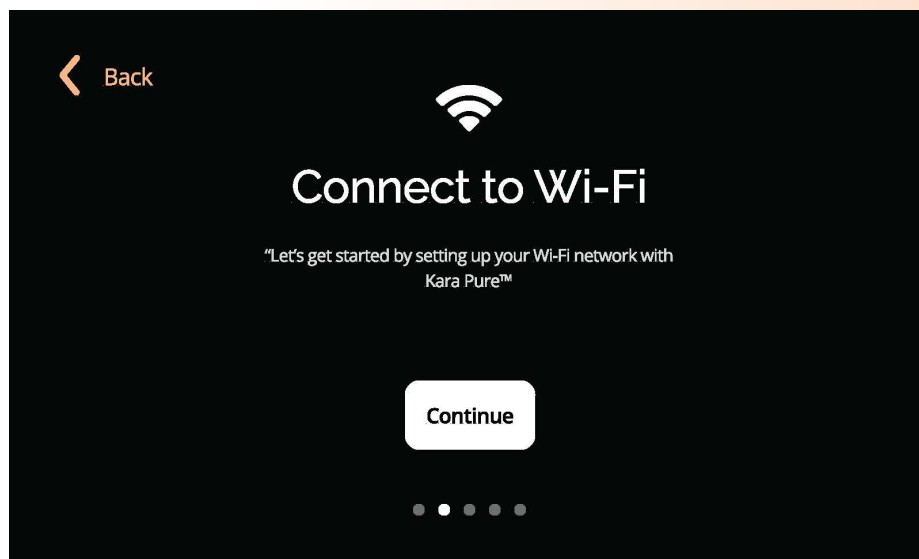

Step 1: Install Filters

- SKIP IF – If your filters have come pre-installed. Using the key provided, check by opening the back door of your Kara Pure. If your filters were pre-installed, you may skip this step.

- DO NOT SKIP IF – Upon opening your Kara Pure, you do not see filters at the bottom of the unit. Follow the instructions in our instructional video "How to Insert / Replace your Kara Pure Filters"

- https://youtu.be/J4bTYA9RnCQ

Step 2: Begin On-Screen Setup

- **SKIP IF** - Upon turning on your Kara Pure your screen does not go to this screen, **SKIP TO STEP 3**

- DO NOT SKIP – If your Kara Pure is on this screen and follow on screen instructions

Welcome to
Kara Pure™

Begin Setup

# Step 2A: Connect to Wi-Fi (Setup)

Step 2B: Skip Filter Priming (Setup)

‹ Back

Filter Priming

SKIP

As with all filters of the type used in our product they must be primed before use to remove any debris and loose particles resulting from the manufacturing process. Priming is simply running water through the filters to flush these particles out. It is normal that the water produced will appear cloudy at first. Discard this water until the unit produces clear water then you will be all set to enjoy your Kara Pure™!

Continue

Step 3: Connect to Wi-Fi (Non-Setup)

- If you do not see your wi-fi name on the list, RESTART your screen from the power button on the home screen.

Step 4: Check for Software Updates

- Follow the instructions in our instructional video "How to update your Kara Pure software"

https://youtube.com/shorts/VHzI2K4yPVE

Step 5: Generate Water

- Upon first use, please allow up to 48 hours for water to generate. This will be reduced to 24 hours AFTER first use.

Step 6: Flush Filter (System Priming)

- Follow the instructions in our instructional video "Priming Your Kara Pure Filters"

https://youtu.be/UG2C-5w2Exs

**IF THIS STEP IS NOT COMPLETED, THE QUALITY OF YOUR WATER WILL BE AFFECTED!

Complete!

- You can now begin to use your Kara Pure!

**Upon flushing your filters, you may need to allow up to 24 hours for your Kara Pure to generate more water.
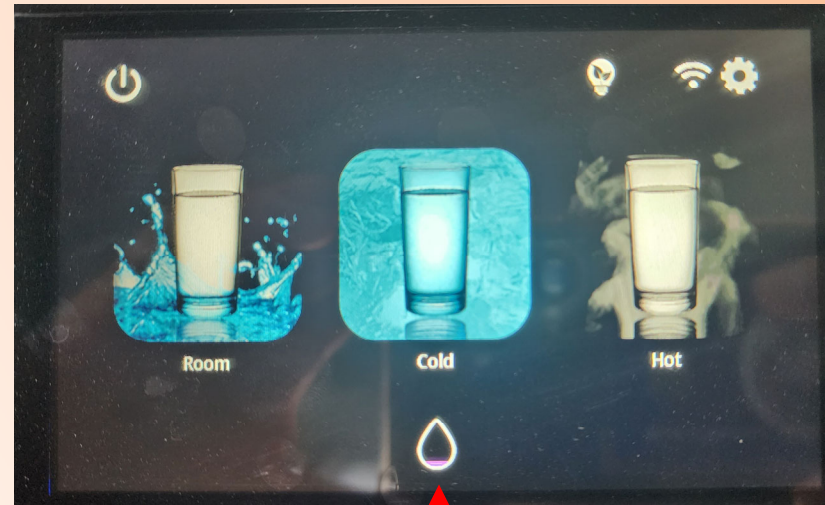

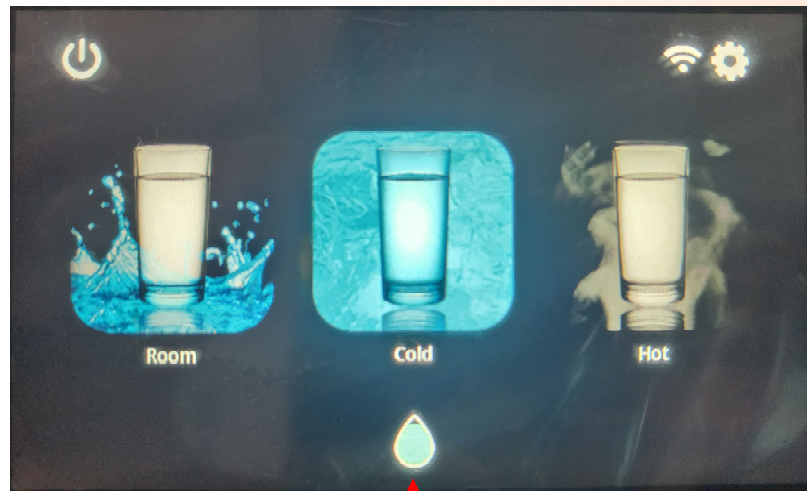

Kara Pure Features

How to make the most of your Kara Pure!

- Water Capacity
- EcoMode
- Sleep Mode
- System Restart
- Safety Features
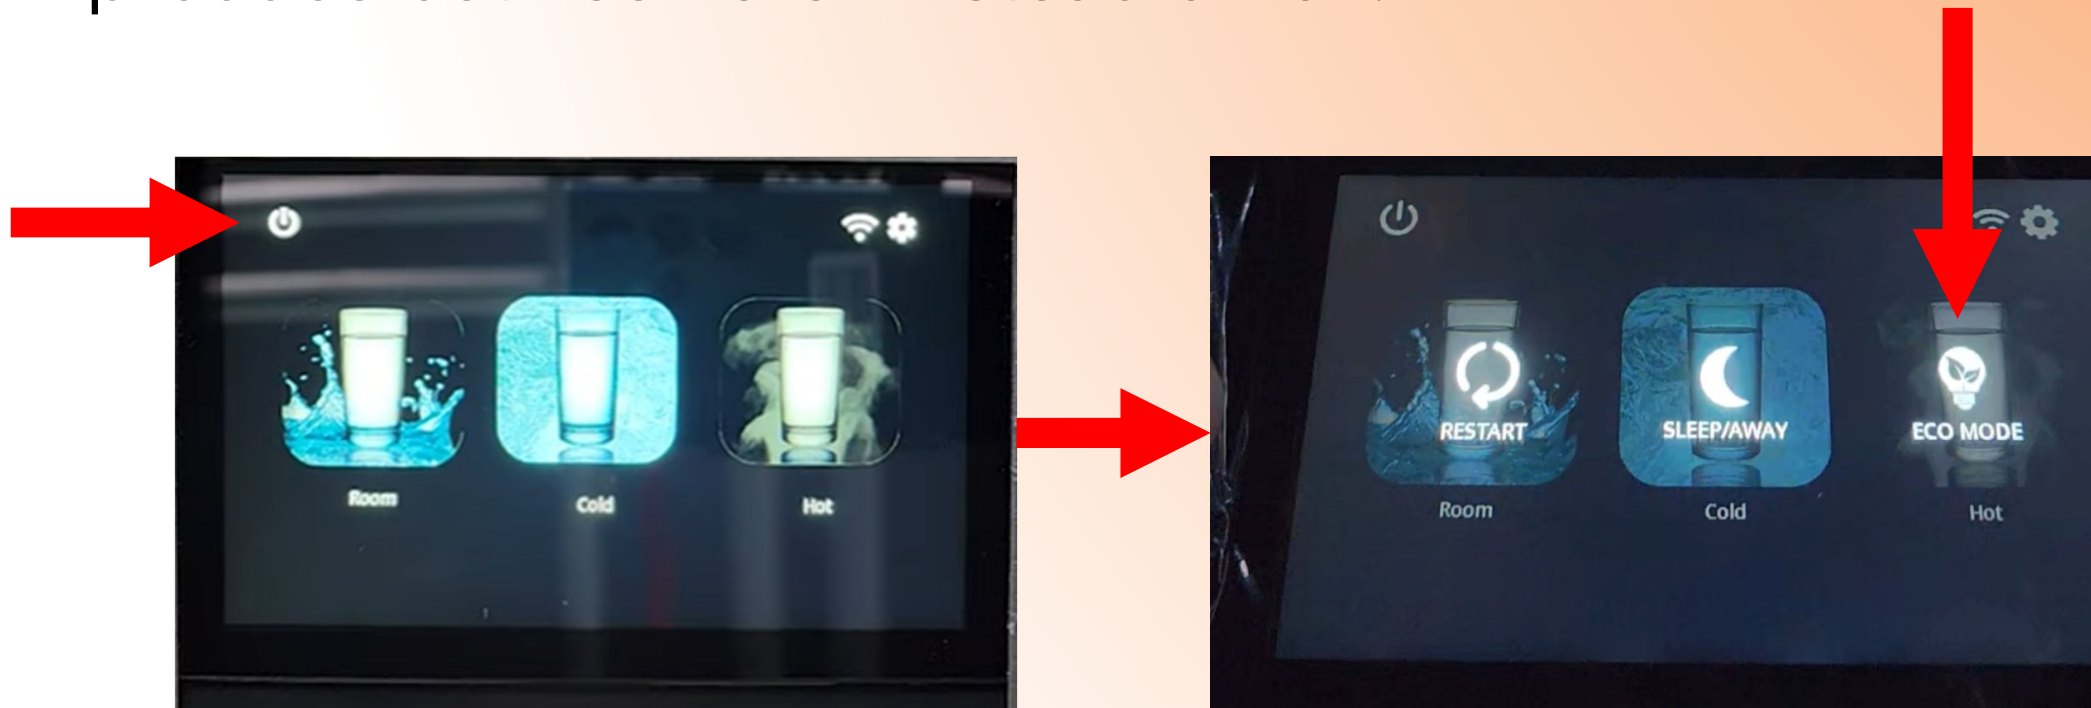

Water Capacity (software v1.44 and up)

- How much water is available: Full / Empty
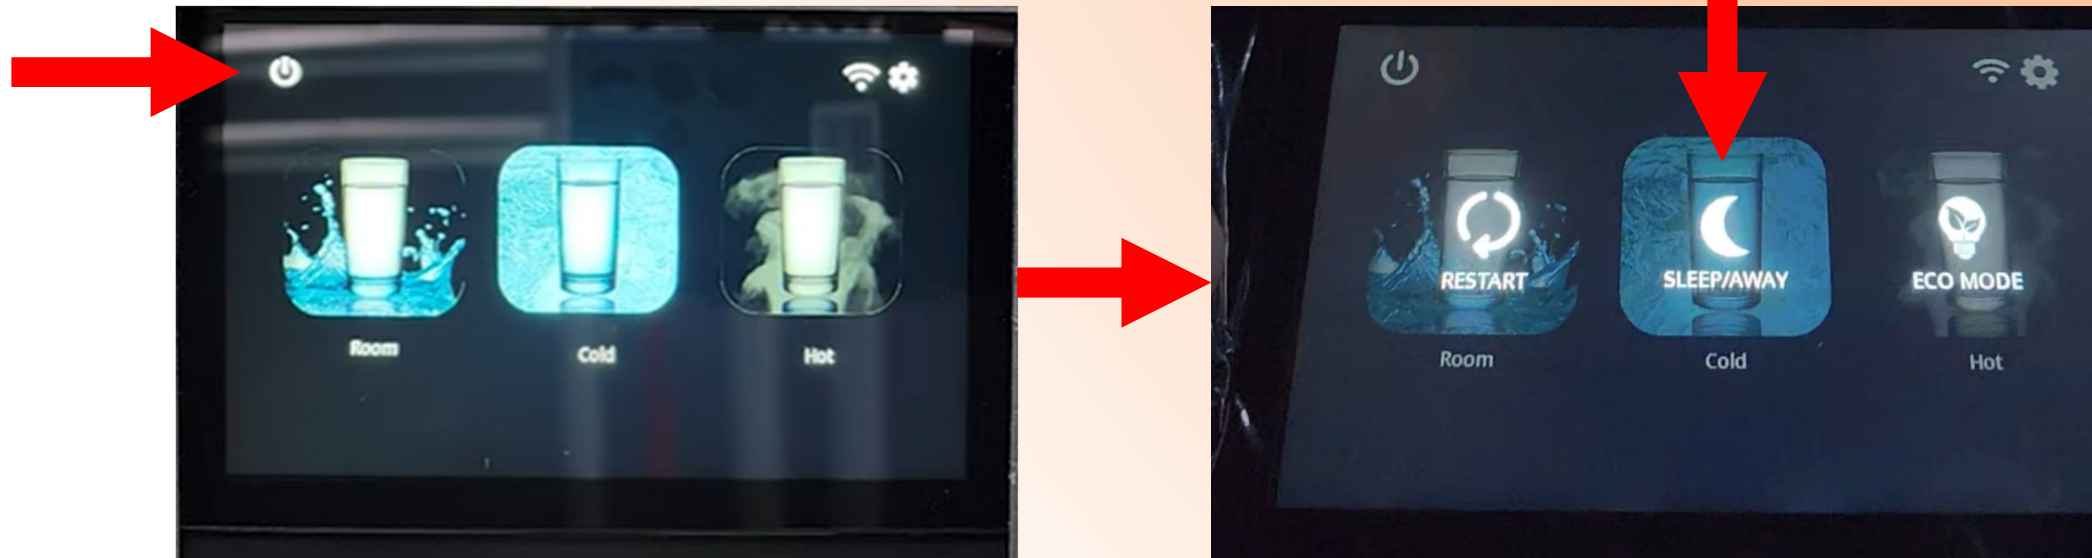

EcoMode (software v1.40 and up)

- Save energy and reduce the noise level of Kara Pure. Will produce between 5-8L instead of 10L.

Sleep Mode

- If you are going to be away for a while or would like to stop your Kara Pure from generating water while still enabling all other functions, you can put your Kara Pure into "Sleep Mode"

Screen Restart

- If you cannot find your wi-fi or a functions seems to be having issues, you can restart your screen.

Safety Feature – Room Temp Locked

- After pouring hot water, "Room" temperature water will be locked until the temperature of the water cools down below 120 degrees F (48C)
