**DBS** DRAWER BOX SPECIALTIES

TYPE #1

- Available with the same top edge options as un-sloped drawer boxes

- Drawer boxes may be ordered with unfinished or pre-finished material

- Also available with all our stock Melamine colors

TYPE #2

- Slope typically begins halfway across the drawer box depth, however a custom dimension can be specified when ordering

- This slope pattern may be requested for any unfinished material or drawers to be finished-after-assembly

TYPE #3

- Lazy "S" slope will begin about 1/3 across of the drawer box depth; the slope will take about another 1/3 of the drawer box depth. Maximum drawer box depth is 30"

- This slope pattern may be requested for any unfinished material or drawers to be finished-after-assembly

- The top edge can be PVC tape.

TYPE #4

- This slope pattern can be used where the top edge is unfinished or finished after assembly.

- Ideal use for this slope is to allow maximum height on the back and most of the side with a very short front, providing better visual of the drawer contents. The heights on the side allows for the installation of a horizontal shelf (ideal for pan lid storage).

- The top edge can be PVC tape.

Custom Slope

- *Please provide a drawing with the radius dimensions at the time of ordering*
