

Case Highlight Details

CLINICIAN

Dr. Kevin Coolidge

PRACTICE

Coolidge, DDS Family & Cosmetic Dentistry

PATIENT

72 year old female

Proclaim Usage

3 Months

History

Implants

ASSESSMENT

Patient presents with a complicated medical history, age-related xerostomia, and has a heavily restored dentition. High caries rate, leading to 6 single-tooth implant restorations and many restorative dental procedures. Despite better than average attention to her dental hygiene, (patient) has had frequent diagnosis of caries and loss of teeth. We apply Silver Diamine Fluoride (SDF) at her 3 month recall appointments and coached the use of dental floss, proxybrush and prescription fluoride products. Patient uses dry mouth lozenges and gum. Patient was prescribed pilocarpine last year. Patient was recommended Proclaim.

RECALL VISIT

Patient has been using Proclaim for roughly 3 months, with Proclaim use 3-4 times daily. At her most recent recall appointment she had no new carious lesions detected. Patient also reports a sense of cleaner teeth.

PATIENT FEEDBACK

Ease of use has been a big advantage for this patient. Rather than doing a good job with hygiene care once a day, she's able to maintain plaque control throughout the day. Dr. Coolidge still recommends using floss and proxybrush once daily.
