## Floating Ironing

The **blowing system** is what makes ironing easy, so easy that everybody can do it.
The blowing system creates an air pillow that allows to move the iron in every direction without creating any wrong wrinkle.
In fact the iron floats over the air pillow and the cloth is not trapped under the iron and so, the wrinkles disappear like a magic.

Vacuum System

The vacuum system assures perfect results because it helps the steam to pass through the fibers. This system helps save time because the steam easily passes through the cloth and allows to iron more than one layer of fabric at once – examples are items such as jeans, linens and all the thick fabrics that would need more than one pass to be ironed.
The vacuum system assures helps keep the garments flat and speed up the ironing job.

Heated Surface

The heating system is very important to keep the garments dry. Ironing over a heated surface avoids steam condensation and the entire system is more efficient.
A dry fabric after ironing is a fabric that remains ironed for a longer time.

" **SMOOTH:**
Completing a task with such grace and fluidity that the onlooker will lose appreciation
for how difficult a task it really was.
