

Don't throw everything away – upcycle.

Build Your Own Greenhouse

Milk or Juice Cartons

Cut open the carton as shown in the picture. Now fill it with soil, add seeds and cover the whole thing with plastic wrap. In no time your greenhouse is ready!

Freezer Bags

You can even make a mini greenhouse with the help of a freezer bag. Take the bag, fill it with soil and seeds, and close it with a small stick or bag clip.

Plastic Bottles

A cut up plastic bottle can also serve as a dome. Simply cut in the middle and stick it in the soil above the plant. The air stored below creates an optimal greenhouse climate.
