

Hive Sphere

lighting collection

Dimensions
Height 410mm
Width 440mm

 **Formation**
connecting people with nature

Sustainable

Designed and crafted using sustainable materials and manufacturing processes.

Locally made

Designed and manufactured here in Dunedin, New Zealand. What stays local, helps local.

Experience

Designs have memorable connections to the landscapes of New Zealand. Each range has a unique story of origin.

The Hive range of lights have been inspired by the manuka bee hives in Cromwell, central Otago. Seeing how bee hives have changed over the thousands of years to the man made colonizing boxes currently used, has influenced my design.

The meaning behind using bee hives as inspiration for this range is that people live and work together in communities, just like how bees work together in the hive. This design is an interpretation on bee hives to remind people that to solve the problems that society and the world possess we need to work together, to make significant change.
