

DoNuts

Instruction
Manual

1. Donuts Build-up

1. Take the cover out of the box and place it on a clean surface, with the holes for the valves upwards.

2. The inflation valve is on the right side. Make sure the pin is in the closed/up position. If this is not the case turn the pin clockwise. The valve on the left is a safety valve to control overpressure.

3. Inflate the Tube with the inflation side of the pump. Screw the nozzle clockwise to lock the hose in the valve. Make sure the cover is always spread evenly over the inner tube. (When the cover needs to be positioned on the tube, see manual chapter 3. Cover Assembly)

4. Inflate the tube until all the wrinkles have disappeared. This takes approximately 2 minutes. You can't overinflate the Donuts because of the safety valve.

5. Turn the tube upside down.

6. Now place the table on the tube. It is best to do this with 2 persons. (When the metal axles are not inserted, see manual chapter Axles insertion)

7. Fasten the table by compressing the pins and positioning the stainless steel U-sections over them.

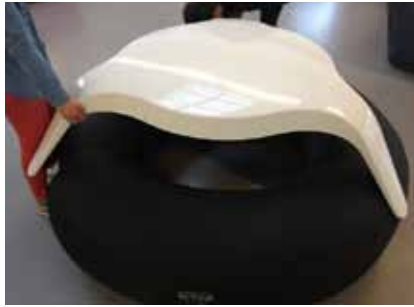

8. Make sure the pins click into the holes on both sides, and are fully extracted.

2. Donuts Break Down

1. Dismantle the table by compressing the pins of the axles and tilt the table feet outwards.

2. Remove the table from the cover. It is best to do this with 2 persons.

3. Lift the Tube with cover where you can see the flagtag. The valves are located near the flagtag.

4. Now press the pin and turn anti-clockwise to set the pin in deflate position. The tube starts to deflate. The process of deflating can be quickened by deflating with the pump.

5. While deflating fold the cover. It is best to do this with 2 persons. The cover can be folded in three times.

6. After folding the cover press the pin and turn it clockwise to close the valve.

7. Place the folded cover into a crate or box for storage.

3. Cover Assembly

1. Take the cover out of the box and place it on a clean surface, with the hole for the valves upwards. When necessary, open the zipper completely.

2. Take the tube out of the box and place it on the cover, with the valves upwards and just above the holes in the cover.

3. Insert the tube in the cover and position the valves on the two holes of the cover.

4. The Tube can be inflated with the inflation side of the pump. Screw the nozzle clockwise to lock the hose in the valve. Inflate the tube until it's getting its round shape. Make sure you don't inflate the tube to much, because that will make it impossible to move the cover.

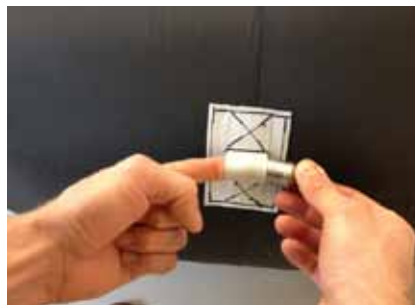

5. Now that the tube has taken on his round form you can pull the cover on its place and close the zipper. Make sure the cover is always spread evenly over the inner tube.

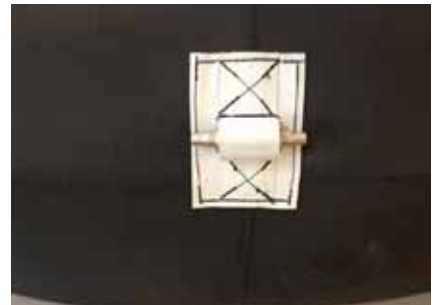

6. Inflate the tube until all the wrinkles have disappeared. This takes approximately 3 minutes.

7. Turn the tube upside down.

8. Insert a stainless steel axle in each of the three table mounting points.
9. Push the axles in by hand while holding the locking strip with you finger.

10. Make sure the axles are centered in the mounting point.

warning!

- * Donuts float, but use on water is at own risk
- * Never inflate or deflate the tube with the table still attached on it.
- * Never open the zipper while the tube is fully inflated.
- * Sharp and/or burning objects can lead to irreplaceable damage to the table as well as the tube and cover.
- * Avoid dragging the table on abrasive surfaces.
- * Never place the table on the ground unprotected, to avoid scratching on the legs of the table.
- * When used on grass, it is recommended to move the table once in a while in order to avoid suffocation of the grass.
- * Do not sit or stand on the table top.
- * Because of the safety valve and best quality of fabrics it is no problem to leave Donuts in the sun.
