Cleansing Crystals Kill Candida on Oral Appliances in Just 20 Minutes

DALLAS, Tex—Developed by Lorin Berland, DDS, Cleanadent Crystals are the ideal cleanser for removable oral appliances. Clinical studies have demonstrated that the crystals can kill *Candida Albicans* and *Streptococcus mutans* in just 20 minutes on dentures, partials (excluding partials with ticonium alloy), snoring and sleep apnea devices, guards, and retainers.

Providing up to 45 deep cleanings per box, the individually packaged, professional-strength crystals are perfect for killing pathogens and removing heavy plaque, stains, and calculus, both at home or during dental visits.

C Albicans is a fungal infection affecting oral tissues that clinical research has found common in most oral appliances. It is the leading cause of denture-stomatitis and is known for its resistance to antifungal agents.

After treating and listening to patients as a dentist for more than 35 years, Dr. Berland has now developed a line of products for common oral issues such as Candida and dry mouth that are not addressed by major brands.
