

Gutter Guard

"WildFire Ember Protection & Pets Abatement"

Clogged Gutters are a Fire Hazard!

FireStorm™ Gutter Guards were designed to protect homes from the danger of embers! It's estimated that up to **90% of buildings lost** in a wildfire are due to **ember attacks**. FireStorm™ Gutter Guards prevent this by acting as a shield, keeping embers and flammable debris out!

Heavy Duty Rails

Our aluminum rail design allows for a lightweight but extremely durable gutter guard.

High Flow 3D Design

Our 3D, stainless steel mesh breaks water surface tension, keeps water flowing freely into the gutter, while keeping debris out.

Stainless Steel Micro Mesh

Our stainless steel mesh provides a physical barrier for **maximum protection** against any debris including **wildfire embers!**

Features

The 3D Micro Mesh design breaks water surface tension which ensures that water can easily flow into the gutter, even during heavy downpour.

Our Micro Mesh has an extruding pattern to lift up debris, such as leaves and twigs, allowing the debris to slip right off. This design helps to prevent clogs and blockages in the gutter guard.

Made out of stainless steel and aluminum, outlasting plastic and uPVC which cracks and warps over time.

Dangers of Clogged Gutters

Ember intrusion is a major cause of homes being destroyed in a wildfire, as burning embers can easily ignite flammable debris that may have accumulated in gutters.

FireStorm™ Gutter Guard play an important role in reducing the risk of ember intrusion by keeping flammable debris out of gutters, eliminating a potential fuel source for a fire.

Keeps Out!

Gutter Guard

"WildFire Ember Protection & Pest Abatement"

ASTM International

ASTM E2768: Ignition Resistant Material

Standard test method for extended duration surface burning characteristics of building materials (30 Min Tunnel Test)

ASTM E84-19B: Class A Rated

Standard test method for surface burning characteristics of building materials

WUI (Wildland-Urban Interface)

Where urban development interfaces with wildlands. These areas are under constant threat of wildfire. Many State's building codes require fire resistant building materials to protect people's homes. FireStorm™ Gutter Guard meets these requirements.

More Information

Chapter 7A

Chapter 7A is a building code in California that ensures exterior building materials in Wildland-Urban Interface areas are fire resistant-rated. FireStorm™ Gutter Guard are tested and listed to ASTM E2768 and E84-19b.

Class A Rated

Class A rated material is a material that is able to handle the most extreme temperatures. FireStorm™ Gutter Guard is a great choice for those who want the best in durability.

FireStorm™ Gutter Guards

Size	5" width x 48" length 6" width x 48" length	Fits industry standard gutter sizes Two size options to ensure a perfect fit
Mesh Size	High Flow mesh	Offers great protection with high flow
Grade	304 Stainless Steel	Maximum durability and mesh life
Style	Frameless	Easy installation and lightweight
Color	Charcoal / Aluminum	Blends in easily with a great finish
