Performance Hardware

New 40mm Dynamic Blocks Available 2023

40MM BLOCKS

Jeepster, J70 – Credit: Tania Hutchings

Introducing our new, high strength, high performing 40mm dynamic block range designed to meet modern sailing requirements. The new 40mm dynamic block range will be manufactured using cutting edge technology and materials and features a completely new cheek design.

The result is a longer lasting and higher performing block which will be available in a wider variety of designs to suit more applications.

This new range will still feature the Allen dynamic bearing technology – twin rows of stainless steel ball bearing running on a stainless steel rail. Ideal for both keelboats and dinghies.

This new range will be available in early 2023 and is expected to grow to include further variations.

Part	Description	Breaking Load kg	MWL kg	Length mm	Max Line Dia. mm	Shackle Pin mm	Weight g

High Roller Blocks

TiiTAN & XHL

High Roller Block Range - High performance blocks designed for high stakes sailing.

Lightweight aluminium side cheeks encapsulate an aluminium sheave, which free spins on roller bearings and side load ball bearings.

Easily unassembled and serviced to give longer lasting high performance.

Ideal for fast running and highly loaded lines on big boats. Applications such as: mainsheets, runners, halyards, spinnaker systems, jib sheets and control lines.

TiiTAN

The TiiTAN Block is a further development from our XHL range. Weighing in at only 28 grams makes the TiiTAN the lightest and strongest 30mm ball bearing pulley available on the market. This is an incredible 30% weight reduction when compared to the 30mm XHL block.

Find out more by scanning the QR code

Fanatic, Cape 31 – Credit: Paul Wyeth

Features:

- Ceramic ball bearings for reduced friction in salt water.
- Titanium sheave for maximum weight reduction.
- Chamfered rope guide for soft attachment with two lashing holes.
- Upgraded XHL bearing system

HIGH ROLLER BLOCKS

TiiTAN BLOCK

A9040

This is the smallest block available on the market which features a high load two-stage roller bearing system. Roller (needle) bearings take the main loads of the sheave and offer great sheave rolling speeds at high loads. The side load ball bearings cater for any off-centre loading and minimise friction further.

A9060

The 60mm high roller block features caged roller (needle) bearings. The cage keeps the rollers spread evenly around the sheave whilst also stopping the rollers from rubbing together. This reduces friction and allows for faster rolling speeds. The side load ball bearings cater for any off-centre loading and minimise friction further.

Part	Description	Breaking Load kg	Length mm	Max Line Dia. mm	MWL kg	Sheave Dia. mm	Weight g	Hole Centres mm

SA9060	Servicing Kit For A9060	-	-	-	-	-	-	-

XHL

The XHL range has been designed to deal with extremely high loads without compromising on low load dynamic performance. This is achieved with our XHL bearing system which features twin rows of stainless steel ball bearings running on a stainless steel axle paired with a precision plain bearing washer. When the XHL range is exposed to extreme static loads, it changes to a plain bearing block. Stopping the ball bearings from getting damaged. As soon as the static load is reduced the XHL returns to a high-performing dynamic block.

Features:

- Stainless steel ball bearings for long lasting performance.
- Stainless steel sheave with V profile, optimised for the fast running of rope without weakening the working load of the line.
- Aluminium side cheeks for a stronger and longer-lasting body which holds its shape under extreme loads.
- Available in six colours: Blue, Black, Silver, Gold, Orange, Purple.

The TiiTAN and XHL range is ideal for use in vang cascades and halyard or control line turning points where static loads can be extremely high but low load dynamic performance is required.

Part	Description	Breaking Load kg	MWL kg	Sheave Size mm	Length mm	Maximum Line Dia. mm	Weight g

A9030	TiiTAN Block	1250	500	30	40	8	28

Tii-On Blocks

Our Tii-On Blocks feature a stainless steel loop at the head of the block. This gives our range maximum strength and reliability with minimal cheek separation when tied on and loaded up with a soft shackle. The stainless steel head loop also ensures the block stays in the right orientation when being used.

Part	Description	Length mm	Max Line Dia. mm	Breaking Load kg	MWL kg	Weight g

Tii-Shackles

This simple and easy attachment system will save weight and give you more options for attaching blocks. Tii-Shackles feature an adjustable loop to make attachment quick and easy. Perfectly designed for use with our Tii-On blocks and Pad-Tii ranges.

Part Number	Description	For Use With	Length mm	Diameter mm	Breaking Load kg	Weight g

High Load Thimbles

Thimbles are a great alternative to blocks when there is a need for high static load capabilities. Our high load thimbles come coated in Teflon to help reduce friction. Machined from aluminium and anodised in a choice of 6 colours, black, blue, silver, purple, gold and orange. Also available in stainless steel.

Ratchet Blocks

AutoRatchet

The Allen AutoRatchet Blocks were the first of their kind on the market some 30 years ago. Years of constant development, with the World's top sailors, has led us to the release of our X2 AutoRatchets. The new "X2" pawl system which incorporates two pawls into the mechanism ensures that the load is evenly shared between both pawls, this means that the block can withstand higher working loads while also increasing both the reliability and longevity. It also features the patented swivel head lock system which can be fixed in position, allowing for more setup options.

Switchable Ratchet

Allen Switchable Ratchet Blocks can easily be switched on or off, even under load. The patented swivel head lock system can be fixed in position, allowing for more setup options. The sheave design gives high grip under load while allowing easy release when required.

A2160
Switchable-ratchet block - Ratchet mechanism can be switched on and off as required.

A2360
AutoRatchet block - Load sensitive AutoRatchet which is triggered when block comes under load.

Wave Ratchet

The wave ratchet offers 20 to 40%* more grip without adding any additional wear to the rope.

The most effective way to increase friction is to add sharp edges to the ratchet sheave, but this quickly deteriorates and wears away the rope. So, after working alongside leading rope manufacturers the Allen design team came up with a simple solution which improves grip without chewing away at your expensive rope.

The Wave Ratchet sheave has an offset V style grip, made from a hard-wearing recycled plastic nylon, which does not have sharp edges that will eat into the rope. Instead, by adjusting the V formation in the sheave to be slightly offset, the ratchet now grips the rope at additional points around the sheave, resulting in more grip. However, the new Wave Ratchet not only improves grip but as a result of the design it also allows for a less 'jumpy' feel when easing the sheets.

*Depends on the type of rope in use with the sheave.

Flip Flop Blocks

Deck Organiser

30mm Flip Flop Blocks

Flip flop blocks are designed to pivot around a central fixing point, this keeps the rope close to the deck, mast or boom whilst still allowing the block to articulate to the correct lead angle, ensuring friction stays as low as possible whilst still guiding the rope to where it needs to go.

Deck Organiser

Designed for leading control lines and halyards along a deck or coach roof.

Features dynamic bearing sheaves. Which uses twin rows of stainless-steel ball bearings running on a stainless-steel rail. This provides a superior load-carrying ability and longevity when compared to other bearing systems which run on a plastic rail.

The cheeks are made from marine grade aluminium and anodised black.

Wire Blocks

Wire Blocks

Specifically intended for use where wire lines are subjected to low rotational high loads. The range uses stainless-steel side cheeks to give maximum strength in the smallest form possible and a single row of spaced stainless-steel ball bearings in the sheave. Available with different accessories including hooks, becket, swivels and shackles giving a whole range of choice to suit the application.
