CCELL: The New Standard

All-New Ceramic Heating Technology

In 2016, CCELL introduced the first-ever ceramic heating platform, setting a benchmark for the vaporizer industry with its groundbreaking advantages in consistency, potency, and flavor. CCELL didn't just stop there – CCELL EVO, our newly introduced heating platform, offers enhanced flavor, vapor production, and compatibility with high terpene extracts, unlocking next-level possibilities for both business partners and consumers.

Establishing New Safety Standards

Product safety is a top priority at CCELL, so our products and raw materials go through rigorous tests to ensure the utmost safety and compliance. In 2021, CCELL upgraded all of its internal components to medical-grade 316L stainless steel, setting a new safety standard for the vaporizer industry.

Complete Customization Capability

CCELL provides a wide range of customization, ranging from ID to surface finish to packaging, so that your products can truly stand out from the crowd. Thanks to our excellent global resources and supply chain management system, CCELL is capable of providing complete ODM options – all it takes is one simple concept from you and we'll turn it into a reality.

Perfection without Limits

Meet CCELL EVO

The cannabis market is ever-changing, and so are consumers. With the rapid increase in the diversity of cannabis extract types, a new trend was observed - consumers need a solution that is compatible not only with traditional distillates, but so much more.

CCELL EVO is our next-generation heating technology designed for outstanding overall performance and greater compatibility with both distillates and high terpene extracts. Whether it's for your company, for end users, or for the environment, CCELL EVO is here to make a change!
