

上消化道內視鏡及 大腸內視鏡檢查

Gastroscopy & Colonoscopy Plan

上消化道內視鏡及大腸內視鏡檢查 Gastroscopy & Colonoscopy Plan

誰應接受上消化道內視鏡及大腸內視鏡檢查？

雙向內視鏡檢查，包括上消化道內視鏡及大腸內視鏡檢查，是一種安全有效的方法來評估整個消化系統的健康狀況，醫生多採用此檢查作癌症篩查及檢測胃腸道出血之用。

對於出現一些原因不明且難以解釋的腹部徵狀 (如腹部不適，多氣，排便習慣改變和貧血) 的人士，可考慮針對消化系統進行全面性的檢查。此外，年齡達35歲以上且計劃進行首次健康檢查的人士，也可考慮接受此項檢查以了解消化系統的健康狀況。

Who should have Gastroscopy & Colonoscopy ?

Same-day bidirectional endoscopy, including gastroscopy and colonoscopy, is frequently performed to screen for cancer and gastrointestinal bleeding. It is often a safe and effective way of finding out if there is a problem with one's digestive system.

Individuals who have non-specific abdominal symptoms such as discomfort, gas, change in bowel habit and anaemia that are not easily explainable can consider undergoing a comprehensive checking to clarify the various conditions of the gastrointestinal tract. In addition, individuals who are aged over 35 and undergoing their first health screening can also consider this plan.
