

MAC BIKE RACK

E-Bikes have become increasingly popular in NZ in the last few years and we get more and more requests to do fit-ups of our hardlids with bike carriers and other accessories for those keen on hitting the road and going on an adventure. Due to the weight of E-bike's any standard off the shelf lid / roof mount bike carriers are not suitable so most E-Bike carriers available are tow ball mounted, they work well until you need to tow the caravan or the boat!

First to market the MAC Utes bike carrier has been specifically designed to carry bikes that are heavier than 21kg and can be easily mounted to your MAC Utes hardlid paired with a crossbar kit.

No wheel removal needed and if you opt to include a Rhino Rack 1.2m Cable core lock you can have peace of mind knowing that your bikes are secured to the bike carrier on your MAC Utes hardlid.

FEATURES & BENEFITS:

- Manufactured with 4mm alloy chequer plate, 3mm alloy sheet & stainless-steel fixtures.
- Powder coated black to match your MAC Utes Hardlid
- Adjustable to accommodate varying sizes of bikes.
- Optional lockable security cable
- Optional handlebar tie down kit to secure bike in place

All MAC Utes hardlids fitted with tracks are compatible with Leg and crossbar kits to mount the bike racks and other accessories.

We also have our adapter bracket kit so crossbars can be mounted onto a MAC300 hardlids heavy duty rails without the need or cost to add tracks.
