WHAT IS AN ETCHED LOGO?

The etching process permanently decorates the surface of glass using a laser or sand-blasting technique. The final logo will appear frosted on gloss surfaces, or clarified on frosted surfaces.

WHAT LOGOS CAN BE ETCHED?

Because of size limitation, logo with small details may not be suitable for etching. Only logos that can be converted to a clearly-defined black and white color scheme can be etched effectively. For the best results, choose a version of your logo with the least amount of details. Logo setup may be subject to initial design fees.
