

Clarke's Safety Mirrors Ltd

Acrylic Mirror

Operation & Maintenance (O&M) Manual

Storage

- Ensure that the mirror is stored flat on a level surface.
- Do not store acrylic mirrors near sources of heat.
- Ensure that the storage area is dry. Avoid water ingress.
- The mirrors should be stored in a safe location where they will not be damaged.

Installation

- Do not over tighten the screws. This can lead to optical distortion.
- Ensure that the substrate is flat.
- Remove protective covering after installation to avoid damage.
- Do not install mirrors resting on wet surfaces such as sinks. Water can rise up the back of the mirror through capillary action, damaging the mirror silvering.
- In damp or humid environments, product life can be extended by sealing the mirror edges, limiting water ingress.

Cleaning

- Use a "Pledge" type cleaner with a lint-free soft cloth.
- Ensure that the cloth is clean and does not contain any sharp debris that could cause damage to the mirror.

Structural calculations and the adherence to planning/building control regulations are the responsibility of the customer.
