

# Tile and Granite Defender™ Kit

## Application Instructions

### Application Instructions

- 1 Start by wetting the surface and using the white scrubber pad with Restoration Powder™ to remove any mineral buildup, soap scum, etc.
- 2 Once thoroughly clean and dry, apply Clear-Fusion™ V protective coating in a well-ventilated area. Spray the coating as needed and wipe with the microfiber towel using firm circular, overlapping motions, going over the entire area at least twice.
- 3 To test the application, spray the surface with water and look for uniform water beads. For areas that are not beading up uniformly, reapply Clear-Fusion™ V as needed.

### Important:

When applying Clear-Fusion™ V to the surface, we recommend approximately five (5) full sprays for each square foot of tile or granite being treated.

### Important:

Make sure the microfiber towel is completely dry when wiping in the coating.
