

# Windshield Defender™ Kit

## Application Instructions

### Application Instructions

- 1 Start by wetting the glass and using the white scrubber pad with the Restoration Powder™ to prep the glass for the Windshield Defender™ application. Make sure to remove all dirt, water spots, etc.
- 2 Once thoroughly clean and dry, apply the Windshield Defender™ protective coating using firm circular, overlapping motions, going over the entire area at least twice.
- 3 To test the application, spray the glass, and look for uniform water beads. For areas that are not beading up uniformly, dry the entire surface and reapply the Windshield Defender™ coating as needed.
- 4 Finalize the application process by polishing the glass with the microfiber towel. If preferred, you may wash the windshield with soapy water.

### Important:

Do not apply the Windshield Defender™ coating in direct sunlight and do not unfold the towelette immediately upon removal of the package; only unfold as needed.
