## EBIKE LIFTER

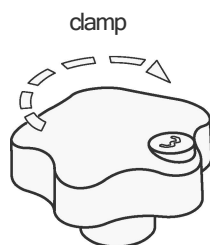

### Star Knob Nut

ebikelifter.eu

clamp / release

When the key is **inserted** {turning is not required), the normal function of the star knob nut (clamp/release) is given.

clamp

**Without** the spanner inserted, the star knob nut can only be clamped, i.e. only clockwise rotation is possible.

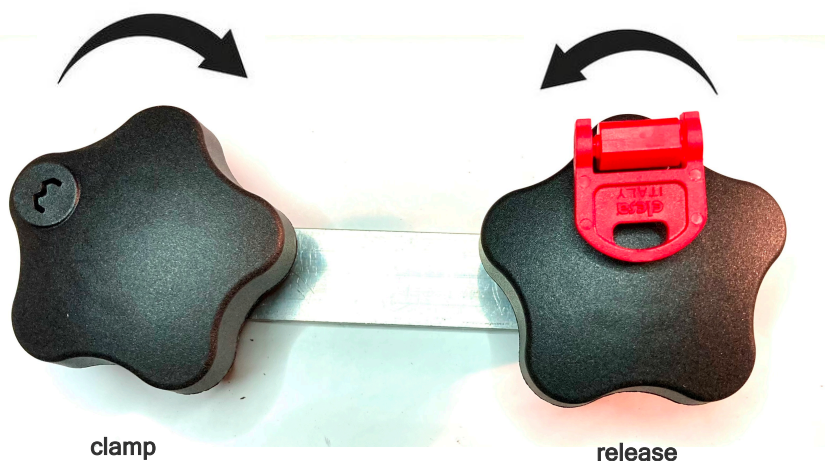

When turning anti-clockwise {release), a locking mechanism interrupts the connection between the handle body and the threaded bush.

### !! ATTENTION

It must be ensured that the star grip nuts press the base carrier of the ebikelifter securely onto the roof rack of the vehicle.

Depending on the design of the roof rack, it is possible that the U-bracket will not clamp properly.

In this case, the 5th enclosed spacer plate or additional washers (for M8) are used to compensate for the gap.
