

1:32 Cattle Feed Trailer Model Kit

1x Floor, 1x Back, 1x Front, 2x Sides, 2x Drawbar Parts, 1x Tow Eye, 1x Axle, 2x Rims, 2x Rubber Tyres.

CLEAN ALL RESIN PARTS IN WARM SOAPY WATER

The silicone release agent used in the casting process will react with paint, it must be thoroughly cleaned off before painting.

This is a rough guide to using the kit. Care should be taken at each stage to make sure the model is going together correctly and any alterations that are not in the instructions should be carried out.

Paint: Components can be painted at any time in the build, it is a case of what suits the builder

Glue: Recommended glue is super glue or contact adhesive.

1. Glue the drawbar back to back and fit the towing eye to the notched slot
2. Glue the side and the front together at 90deg with the engraving on the outside.
3. Add the floor in place and the front panel as pictured
4. Enclose with the second side panel and glue the drawbar on through the slot in the front 3cm into the body.
5. Paint the body and wheels (use an automotive primer before topcoat) and then glue the wheels to the axle with the axle slotted through the holes in the body
