

## PRO WATER 11mm UNICORE

Semi-static type A floating rope for work at height above water (wind turbines at sea, oil platforms). It can also be used for white water rescue.

A new patented technique in the PRO WATER 11 mm makes it the first floating semi-static type A rope on the market. Thanks to its limited shrinkage in water, its flexibility will be preserved and the knots will remain easy to make. In the event of the operator falling into the water, boat rescue personnel will easily see this orange rope which, due to its buoyancy, will not get caught in the propeller. The PRO WATER rope also benefits from all the advantages of the UNICORE technology giving an undeniable extra security.

Weight : 80 g/m  
Sheath percentage : 33  
TYPE A  
Breaking load : 2500 kg  
Standard : CE EN 1891  
Impact force : 5,3kN
