

The IONIC Thermacore Dual™ has a salopette style trouser with a smock top style jacket that creates an ideal thermal layering system for extreme climate conditions. It provides optimum thermal insulation, together with the versatility that a two piece garment offers to cover a range of activities. The durable yet lightweight fabrics used in the manufacture of the suit make it extremely comfortable to wear even during prolonged periods of use. Its ability to easily compress means that the suit doesn't feel bulky and provides an excellent combination of thermal insulation with great functionality. The Thermacore Dual™ can be worn with or without a base layer system, whichever suits the user's requirements.
