

LIFX

TILE

# Getting Set up.

# Plan ahead:

**Place your Tiles  
face down on  
a tabletop in  
your desired  
arrangement.**

**Ensure a power  
supply is nearby.**

**2** —

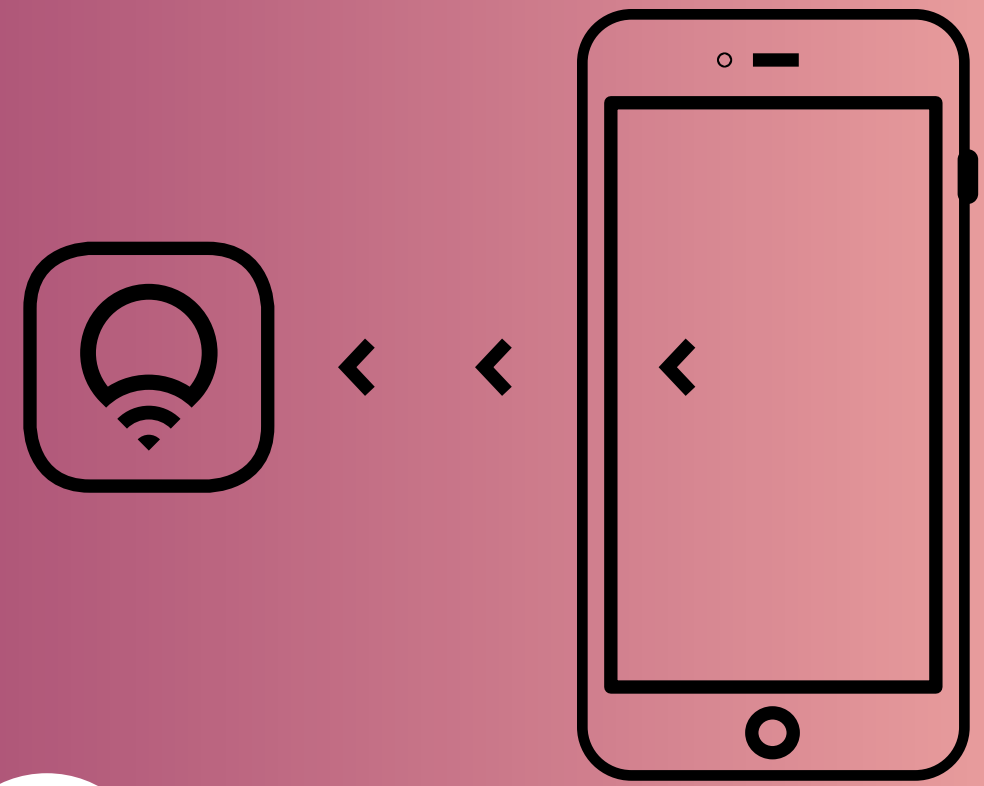

## Plug them in:

**Locate the starter Tile by the green dot located on the back. Plug the Starter Tile into the wall via the long cable.**

**Connect all remaining Tiles securely via the short cables in the desired layout.**

# 3—

Connect to  
App: Download  
and open the  
LIFX App.

From here you  
can click the +,  
select the starter  
Tile and onboard  
it. All remaining  
Tiles will onboard  
automatically.

**4**—

## **Check power-supply:**

**All Tiles should light up either white or blue to indicate they are working.**

**If any Tile appears red, it is not receiving power. We have troubleshooting steps to help if this happens—**

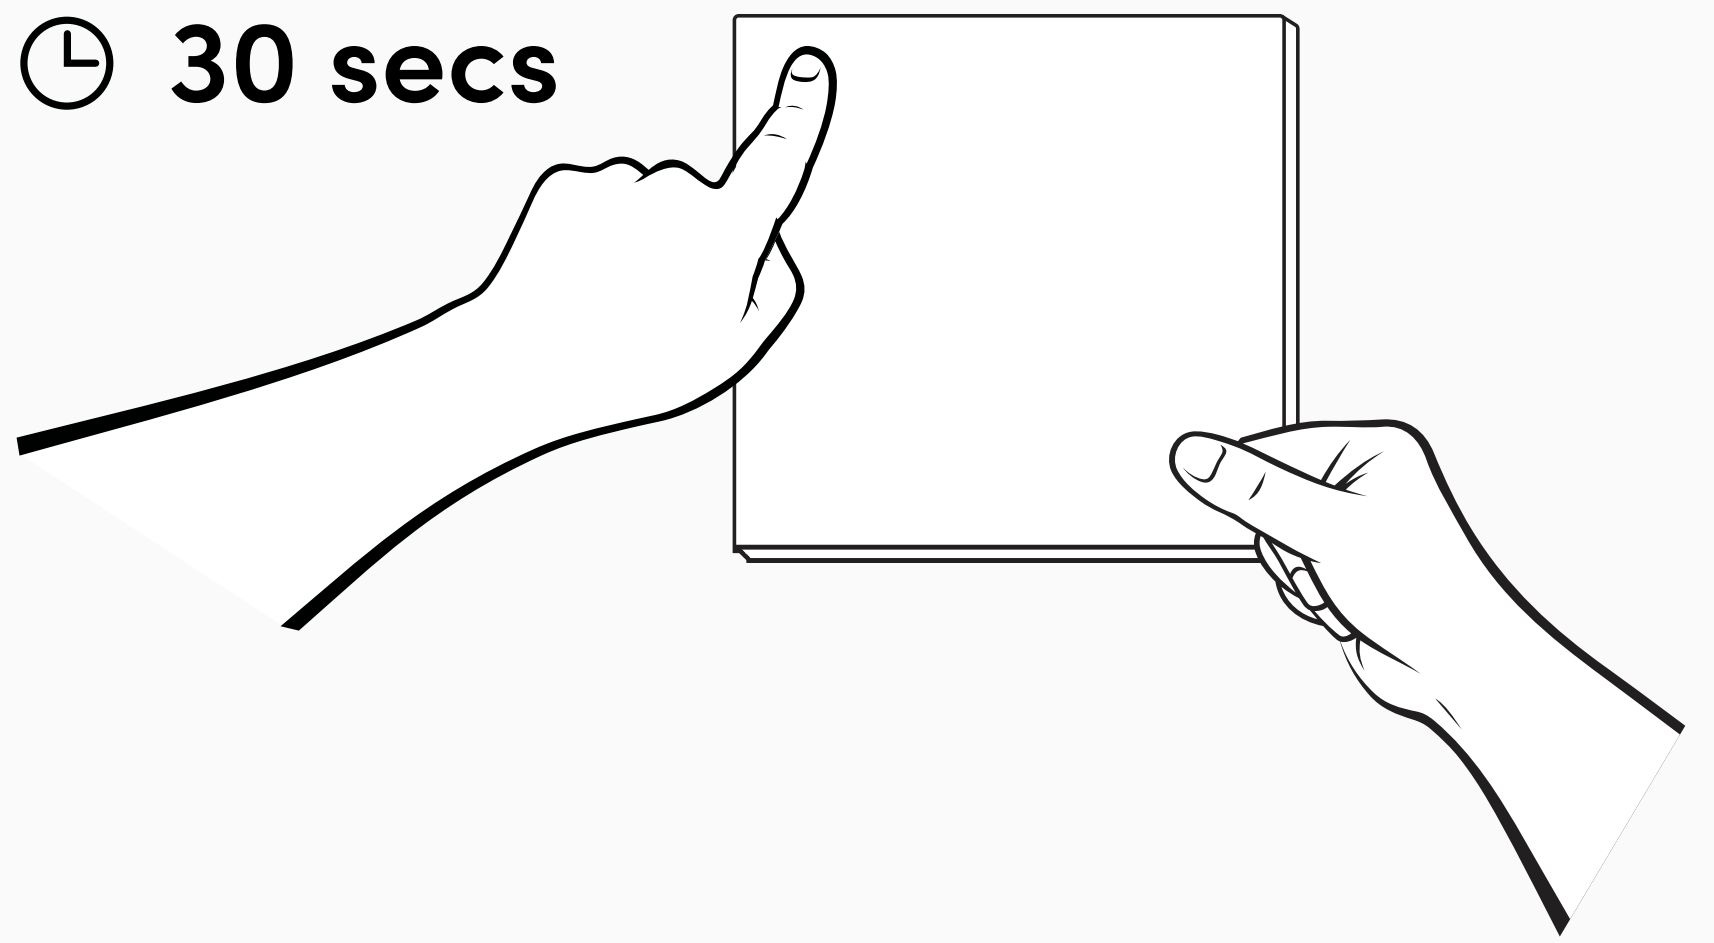

**HELP MY TILES ARE RED!**

**5** —

## **3M Strip**

## **Placement:**

**Disconnect all cables, turn off the power supply and remove the sticker backs off the 3M strips on each Tile. Position a single tile on the clean wall — keep Tile cables disconnected throughout.**

**Press each corner of the Tile firmly onto the surface for 30 seconds (a second set of hands helps if you can get them!) Once stuck, figure out the position of the next one.**

**Remove each Tile as you go to allow the adhesive to set without weight (see next page for tips).**

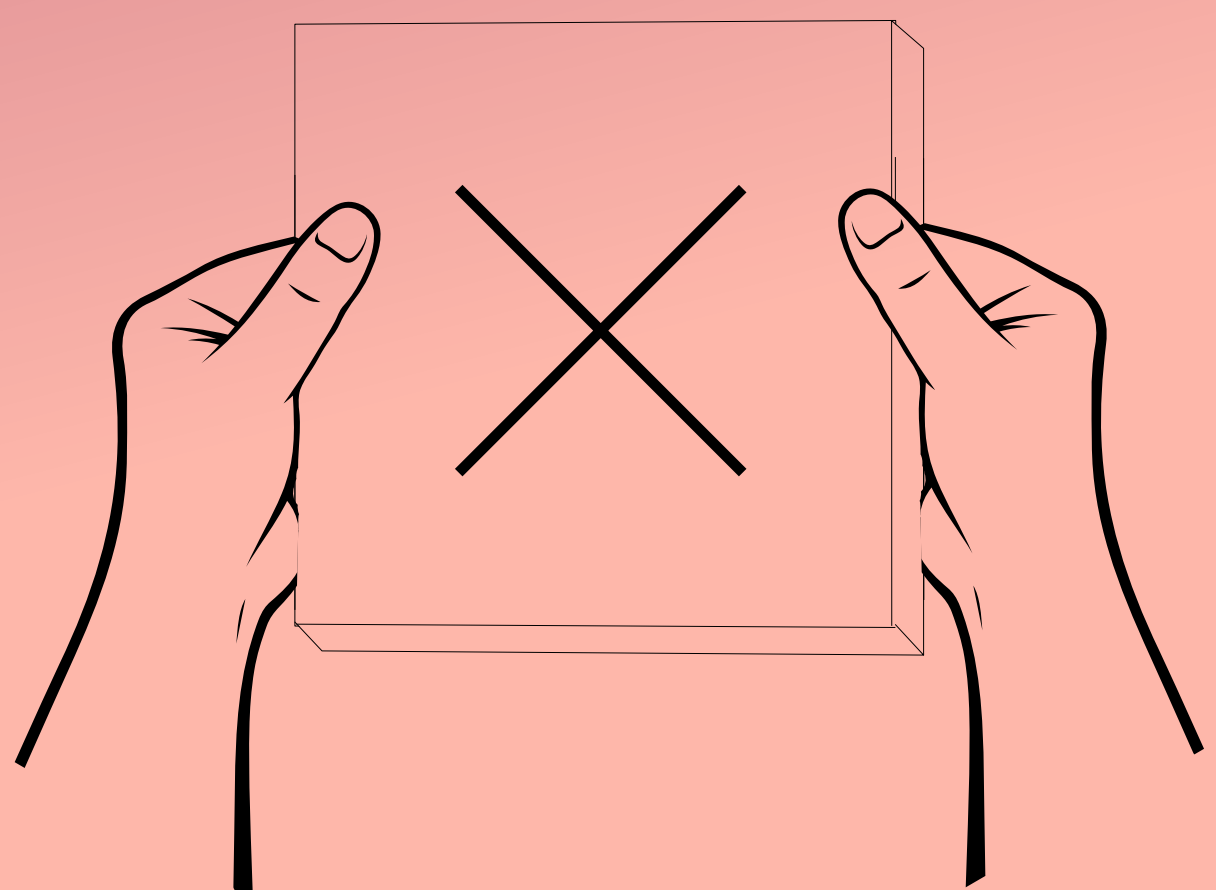

***Repeat for all remaining Tiles.***

# Tip.

**When removing Tiles from the wall, grip one corner and pull towards you. Steady the Tile with your other hand so it won't drop.**

**Do not pull the whole Tile straight towards you to remove.**

# 6—

## Set 3M Strips:

**Allow to set for 60 minutes, this will prevent any Tiles from falling at a later date due to weaker adhesion.**

 60 mins later..

# 7

## Install:

**Now you're ready to place your Tiles back on the wall. Reconnect the small cables as you go, weaving them through the channels at the back to hide them. Do this one at a time and leave some length to connect the next Tile.**

**Copy this cord layout  
for a good side-by-side  
Tile layout fit.**

**Line up and press each Tile back into the 3M Command Strips—you will hear them click as you press each corner. Reconnect the Starter Tile to the power supply and turn on.**

**LIFX**

TILE

**Your Tile  
should  
now be  
ready to  
use!**
