

CVO FIRE 

BIO ETHANOL FIRES

HIGH EFFICIENCY

BIO ETHANOL FIREPLACES EXPLAINED

THE TECHNOLOGY: The fires operate with a special alcohol fuel which is manufactured from plants. This fuel is clean burning. Bio ethanol fireplaces do not require a chimney or a flue system and are classed as 100% efficient as the heat paid for in burning the fuel returns to the room. Normal ventilation in the room is sufficient to remove any emissions. Most bio ethanol fireplaces are easy to install and use. Many models are freestanding however other models can be mounted on to a wall or recessed into the wall. Our range includes both manual and remote control burners.

WHY CHOOSE A BIO ETHANOL FIREPLACE FROM CVO FIRE: We are a UK company with sales consultants available on the telephone 01325-301020 to help and guide you through the requirements and technology. Bio ethanol fireplaces can be viewed "live" in our FIREVAULT fireplace showroom in the North East just off the A1 Motorway at J59. Unit 4, Beaumont Square, Durham Way South, Newton Aycliffe, Co Durham, DL5 6XN. As a UK manufacturing company we are also able manufacture bespoke burners and enclosures upon request.

QUESTIONS ANSWERED:

What fuel do these type of fireplaces use? Bio ethanol fireplaces use a specially formulated bio-fuel, which produces real flames and real heat. It is advised to use good quality bio-fuel. There are many brands on the market and the results achieved from them vary greatly.

What are the positive aspects of this type of Fire? Bio ethanol fireplaces provide a decorative form of heating for homes without a gas supply or chimney. This means they can be used in most places where installing a gas or wood burning fire would cost too much. This style of fireplace is classed as a 100% energy efficient form of heating therefore the fuel you pay for stays in the room and is not wasted up a chimney.

What are the negative aspects of this type of Fire? The running costs can be higher per KW of heat when compared to other heating systems. The actual cost will depend on the size of burner chosen. The burner trays we sell include special ceramic matting which improves the fuel usage and stabilises the flame. The liquid fuel is a flammable liquid therefore consideration must be given to where this is stored. It is advised to keep the fuel outside in a store and only bring in small amounts to use when required. A bio ethanol fireplace cannot be used to heat your entire home, they are decorative fires for use for short periods when extra heat is required in a room.

Do I need a chimney or a flue system? No.

What is the heat output? This depends on the size of the burner that is chosen. The wider the burner flame then the higher the heat output and increased running costs. It is best to choose a model which will give a steady heat to ensure you get maximum comfort from the fire. Call our sales team with your room dimensions and we can quote the most suitable design to choose.

What are the running costs? As above this depends on the size of the burner and also the quality of the fuel purchased. Cheap fuel may not give the same heat output and may not last as long as a quality fuel.

Is there any smoke or smell? Under normal usage, with good quality liquid bio ethanol fireplace fuel there will be no smoke. A slight smell can sometimes be noticed after the fire has been extinguished and will disperse quickly. As advised above the quality of the fuel has a great effect on the flame quality, smoke and smells. The quality of the fuel is the most critical factor when operating this type of fire. Never use "gel fuel" in any of our fires. Gel fuel should only be used outside as it can create smoke and harmful emissions. Never use gel fuel in a fire designed for bio ethanol fuel.

Are bio ethanol fireplaces safe? Bio ethanol fireplaces have been available in the USA for over 20 years and are growing in popularity in the UK and Europe. They are widely used in countries like Germany. The fireplaces we sell are tested and designed to be as safe as possible, stable and secure. Normal common sense and adherence to Health and Safety is required when dealing with a naked flame and handling flammable liquids and caution has to be exercised especially where young children and elderly people are in the vicinity. Our fires have been designed to a high standard and have been tested for safety and durability. To ensure your safety, you should only use liquid fuel designed for bio ethanol fireplaces and no other chemical or substance should be placed in the burner. Bio ethanol fireplaces should never be refilled or moved when hot or still lit.

How do I install my fireplace? Always read the manufacturers installation instructions before installing and using a bio-fuel fire. With some models a builder will be required to construct a non-combustible chamber in which to house the burner. Installation instructions are included with the fire.

Do you make custom or bespoke designs? We are renowned for creating stunning, desirable fireplaces. Our clients are based around the world and our fires are specified by top designers and architects. Our bespoke fires are designed to a high standard and we will not compromise on style or materials just to make a fireplace "cheaper". We can design a custom made fireplace however this will involve development costs. If you have a specific requirement and a budget to match please call our sales advisors who can discuss your project in detail and suggest the best and most cost effective solution.

CVO-1000 BIO ETHANOL FIRE Hole in the wall design.

DESCRIPTION

The CVO-1000 bio ethanol ribbon burner is clean burning and has a 100% efficiency rating and has been designed for use in homes where a larger heat source is required.

This contemporary fireplace design is manufactured in the UK. There is no need for a gas supply or chimney. The fire has a heat output (on full) of approximately 6kw this can be reduced by partially closing the lid to reduce the flame.

The burner is manufactured from very high grade brushed stainless steel and is supplied with a safety tray. The burner features our special ceramic matting which will stabilise the flame and extend the burn time.

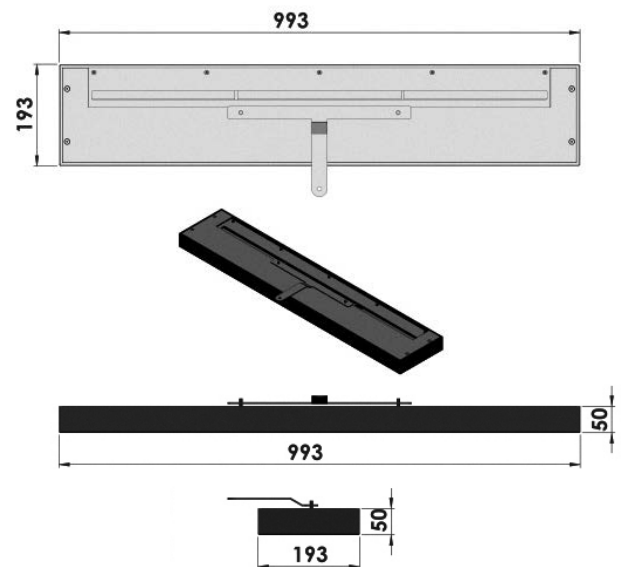

The CVO-1000 can be supplied with a wide range of standard single sided and double-sided enclosures in polished, brushed, or black steel. The standard enclosure has an opening of 1200mm x 400mm x 300mm. By buying the enclosure and burner together installation is straightforward.

“Built in, Flueless, Smokeless, Eco and environmentally friendly”

- Ribbon burner for use with bio ethanol fuel for fireplaces.
- The heat output on full is approx 6.0kw, reduced by partially closing lid.
- The burner is supplied with a Safety Tray which must be used.
- The burner incorporates ceramic matting to increase burn time.
- Tray capacity is 3 Litres [maximum] - Do Not Overfill Tray.
- The burn time on full is approximately 3-4 hours.
- The burner time can be extended by partially closing the lid.

OPTIONS:

- The overall size of the burner and safety tray is 993mm x 193mm with a depth of 50mm.
- The burner is 100% energy efficient as the heat generated stays in the room or property.

- The burner is suitable for use in a custom designed fireplace or can be purchased with one of our standard single sided or double-sided enclosures.
- We can also manufacture bespoke enclosures upon request.
- As this is a very large burner some room ventilation will be required, this can be provided by partially opening a window.
- If purchasing just the burner the buyer must use the burner in a fireplace opening made of non-combustible materials with clearances to combustible materials.
- Consult the installation booklet supplied with the tray and building regulations.
- No building work should be started until the tray is on site and the installation instructions have been received and consulted.
- Visit our YouTube page for a video of this fire working.
- Visit the www.easyfire.co.uk web site for technical and installation manual.

CVO-600 BIO ETHANOL FIRE

Hole in the wall design.

DESCRIPTION

The CVO-600 bio ethanol ribbon burner is clean burning and has a 100% efficiency rating and has been designed for use in homes where a heat source is required without a gas supply.

This contemporary fireplace design is manufactured in the UK. There is no need for a gas supply or chimney. The fire has a heat output (on full) of approximately 4kw this can be reduced by partially closing the lid to reduce the flame.

The burner is manufactured from very high grade brushed stainless steel and is supplied with a safety tray. The burner features our special ceramic matting which will stabilise the flame and extend the burn time.

The CVO-600 can be supplied with a wide range of standard single sided and double-sided enclosures in polished, brushed, or black steel. The standard enclosure has an opening of 800mm x 400mm x 260mm. By buying the enclosure and burner together installation is straightforward.

“Built in, Flueless, Smokeless, Eco and environmentally friendly”

- Ribbon burner for use with bio ethanol fuel for fireplaces.
- The heat output on full is approx 4.0kw, reduced by partially closing lid.
- The burner is supplied with a Safety Tray which must be used.
- The burner incorporates ceramic matting to increase burn time.
- Tray capacity is 2 Litres [maximum] - Do Not Overfill Tray.
- The burn time on full is approximately 2-3 hours.
- The burner time can be extended by partially closing the lid.

OPTIONS:

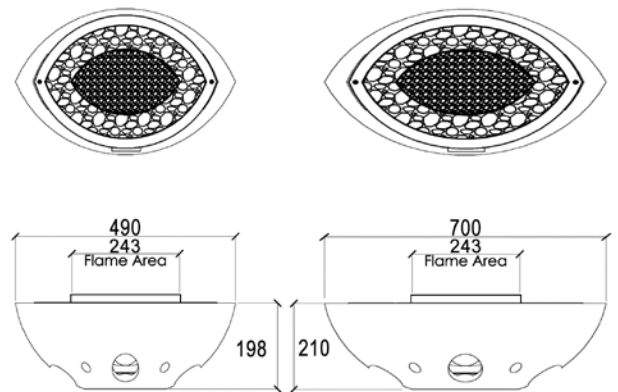

- The overall size of the burner and safety tray is 600mm x 193mm with a depth of 50mm.

- The burner is 100% energy efficient as the heat generated stays in the room or property.
- The burner is suitable for use in a custom designed fireplace or can be purchased with one of our standard single sided or double-sided enclosures.
- We can also manufacture bespoke enclosures upon request.
- As this is a large burner some room ventilation will be required, this can be provided by partially opening a window.
- If purchasing just the burner the buyer must use the burner in a fireplace opening made of non-combustible materials with clearances to combustible materials.
- Consult the installation booklet supplied with the tray and building regulations.
- No building work should be started until the tray is on site and the installation instructions have been received and consulted.

OVAL FIRE BOWLS

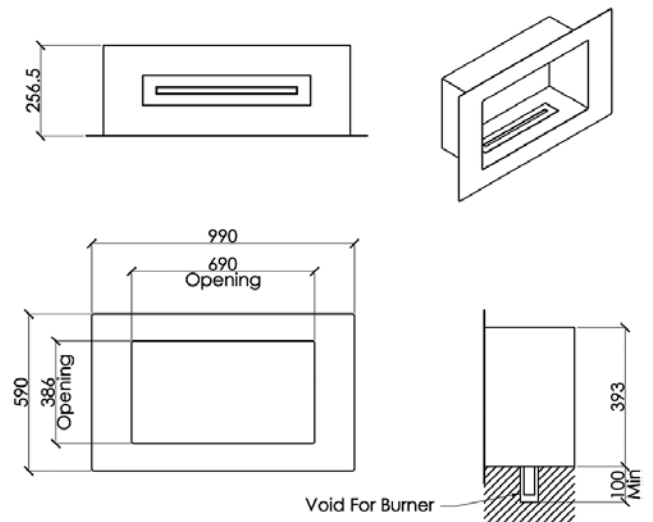

Weight: 25kg
Material: bowl in white, black, aluminium or bronze

FIRE VESSEL

Weight: 10kg
Material: polished aluminium, polished bronze

FRANCESCA

Weight: 15kg
Material: black painted steel with brushed or black fascia

REMOTE CONTROL BIO ETHANOL BURNER TRAYS

DESCRIPTION

Remote control bio ethanol trays are high quality ribbon burner inserts, operated by remote control and have a 240v power supply.

These high quality remote burners are built to the latest safety standards and are available in 7 sizes from 660mm wide to 2300mm wide.

The remote bio ethanol burners have heat outputs ranging from 3.8Kw (660) to 15.6Kw (2300).

These remote control bio ethanol ribbon burner inserts are ideal for custom made fireplace designs and can be used homes, bars, hotels and restaurants.

With sizes up to 2300mm wide and high tray capacities a stunning feature fireplace can be designed. With a wide range of standard enclosures.

AVAILABLE IN SIZES:

- 660 Dimensions = 660 x 240 x 135 mm
- 820 Dimensions = 820 x 240 x 215mm
- 1000 Dimensions = 1000 X 240 X 215mm
- 1200 Dimensions = 1220 x 240 x 215mm
- 1500 Dimensions = 1520 x 240 x 215mm
- 1800 Dimensions = 1820mm x 240mm x 215mm
- 2300 Dimensions = 2300mm x 240mm x 215mm
