

# CIGAR HUMIDOR

Experience Unparalleled Elegance with probably the most technologically advanced Cigar Humidor in the world.

Preserve the true essence of your cigars with authentic Spanish cedar wood lining and drawers

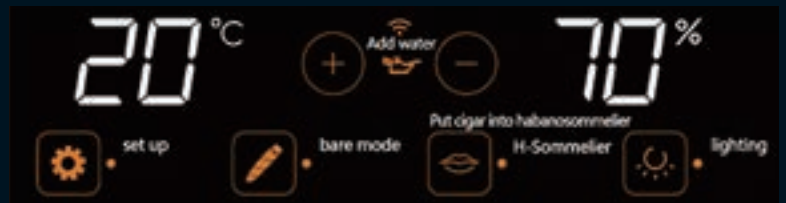

Crafted with precision using a state-of-the-art Water Cooling System from the US

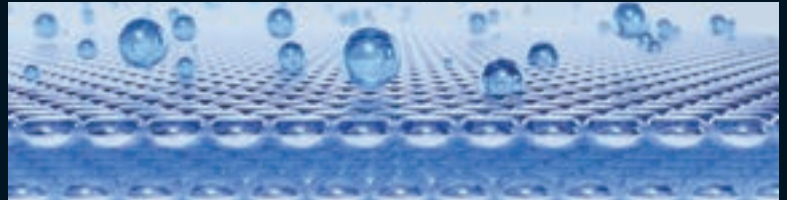

Experience unmatched purity with advanced Ammonia Removal Technology from Japan

# PREMIUM SERIES UNIQUE FEATURES

## **The Adaptive Water Cooling System is the ultimate solution for temperature and humidity control**

The intelligent system, with up to 7 sensors, continuously monitors the internal and external climate to precisely control and stabilize the temperature and humidity (+/- 1°C and 1%). This ensures the cigar's flavor and aroma are preserved through continuous fine-tuning of the US-made water cooling evaporator, humidifier, and local area airflow.

## **0.4 Nanometer Humidifier - tiny but mighty cutting-edge humidification technology for your cigars**

With the nanoscale humidifier releasing minuscule 0.4 nanometer water molecules, your cigar wrapper's oil membrane is deeply and uniformly penetrated, avoiding over-moistening of the cigar. This technology ensures that the cigar's core is reached without getting the wrapping wet.

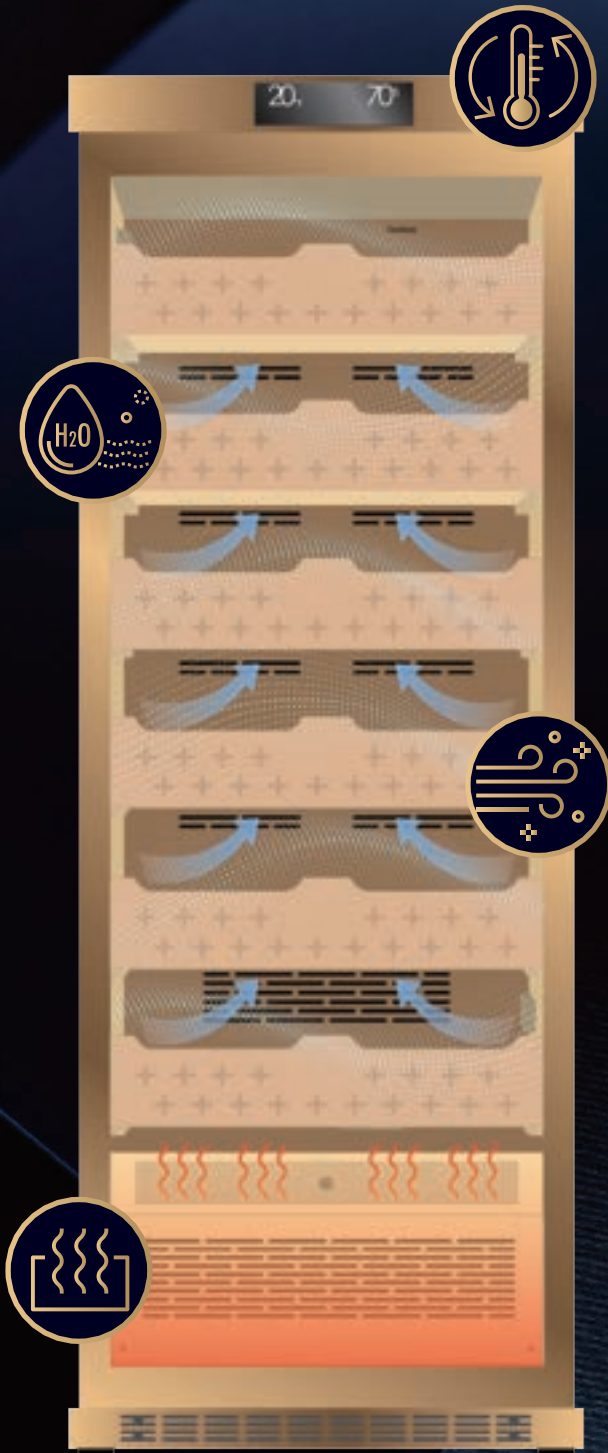

## **Eliminate unwanted odors and keep your cigars pure with the Ammonia Removal System**

Keep your cigar's aroma pure with the ammonia removal plasma emitter from Japan. This innovative technology removes the ammonia naturally released by cigars, especially newer ones, which can cause unpleasant odors to accumulate. The system ejects ionized OH molecules at a rate of 480 billion molecules per second, removing the hydrogen atoms (H) from ammonia (NH<sub>3</sub>), and combining them into water (H<sub>2</sub>O), ultimately eliminating the ammonia.

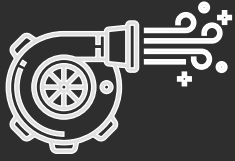

## **Unleash the Full Flavor of Your Cigars with the Cigar Activation Box**

Quickly and independently activate cigar delicacy and aroma with the cigar activation box, which heats up and dehumidifies the cigars up to 50-55% the optimal conditions for flavor enhancement.

## COMMON FEATURES FOR PREMIUM AND REGULAR SERIES

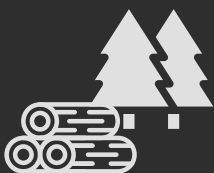

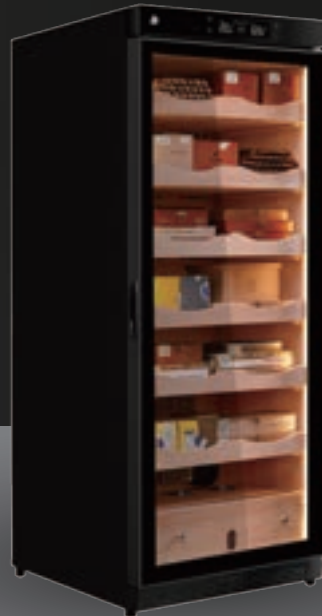

Multiple 4D turbo silent fans to distribute air evenly in all directions

Separate air ducts for hot and cold air so that humidity will not fluctuate when hot and cold air meets, coupled with multiple 4D turbo silent fan to distribute air evenly in all directions.

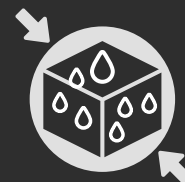

Water tank is cooled to 2-5°C with silver ions sterilizer to keep the water free of bacteria and mold.

Full Spanish Cedar Wood Liner in addition to cedar wood drawers. The cedar wood gives a pleasant aroma, absorbs and eliminates odors, stabilize humidity levels, and prevents condensation.

S-shape wet film magnifies humidifying rate by 20 times vs traditional wet films, ensuring cigars' inner water content is retained in all climates

Condensation free Refrigeration parts are detached from the liner and enclosed in an independent "black box" to collect condensation, making the cabinet free of condensation so that humidity is more uniform across the cabinet.
