

Series T5/T6/V5

### FLANGED OFFLINE NON-METALLIC DIAPHRAGM SEALS

REOTEMP's Flanged Offline Non-Metallic Diaphragm Seals are designed with an upper and lower housing bolted together with a Teflon or Viton diaphragm bonded to the upper housing. This design allows for the lower housing to be removed for easy cleanout of the seal chamber while still maintaining the system fill. The Teflon and Viton diaphragm are ideal for protecting the pressure instrument from corrosive process fluid.

*Transmitter (Gauge Pressure)	15 psi	5 psi	30" H <sub>2</sub> O
*Transmitter (Differential Pressure)	n/a	200" $H_2Od$	60" H <sub>2</sub> Od
Differential Pressure Gauge	n/a	300" H <sub>2</sub> Od	100" H <sub>2</sub> Od

\*Warning: Non-metallic diaphragms are not recommended for critical transmitter applications.

Maximum Working Determined by flange. Pressure

### **FEATURES / BENEFITS**

- · Removable Lower Housing Design for Easy Cleanout
- Wide Variety of Plastic and Metallic Lower Housing Materials
- Highly Sensitive and Corrosion Resistant Diaphragm
- High Displacement Diaphragms Ideal for Mechanical Differential Pressure Gauges and Low Pressure Gauges

Note: stud bolts provided as a convenience. Reotemp recommends customer provide their

own bolts and fasteners.

### DIFFERENTIAL PRESSURE ASSEMBLY

**Balanced System** A complete assembly with one part number that includes two diaphragm seals, two capillaries, two fills, and one complete assembly calibration certificate.

 Image: Register of HP and LP Sides, capillary exit through process connections. Capillary nounts only.

 Image: Register of HP and LP Sides, capillary exit through process connections. Capillary nounts only.

 Image: Register of HP and LP Sides, capillary exit through face of cover flange. Capillary mounts only.

 Example: W9FFWR31S-B10-AS-RA

**Unbalanced DP System** Where seal, mount, capillary, or fill is not identical. A complete assembly includes one diaphragm seal on the HP side AND one diaphragm seal on the LP side.

### **DIAPHRAGM SEAL ASSEMBLY TO SMART TRANSMITTERS**

REOTEMP specializes in the unique craft of assembling diaphragm seals to field transmitters for the purpose of measuring pressure, differential pressure, level, and flow. As a trusted supplier to many of the world's leading transmitter manufacturers, REOTEMP can assemble a diaphragm seal system to virtually any make or model transmitter. Every transmitter mount includes the features below to ensure superior performance and durability for every assembly. REOTEMP also offers repair, refurbishment or replacement of used transmitters with remote seals.

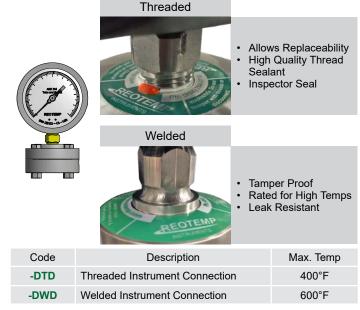

### **INSTRUMENT MOUNTING CONFIGURATIONS**

#### **DIRECT MOUNT**

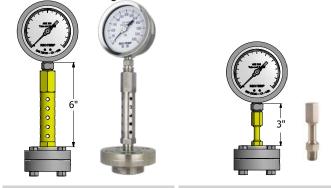

Direct Mounting a pressure gauge, switch, or transmitter is the most common diaphragm seal assembly.

Assembly Notes: Welded connection recommended for pressure exceeding 1,500 psi for purposes of leak prevention.

#### **COOLING ELEMENTS**

Used in either high temp or cold temp applications, Cooling Elements mounted above diaphragm seals quickly normalize fluid temperature toward ambient. This protects the pressure instrument while still maintaining the convenience of a direct mount.

-RTR		-STV	V
Code	De	escription	Max. Temp
-RTR	6" Cooling To	wer	750°F
-STW	3" Cooling Sta	andoff	600°F

Assembly Notes: Cooling elements are welded to diaphragm seal. Instruments are threaded to cooling element unless specified. All lengths are nominal.

(800) 648-7737

#### **REMOTE MOUNT**

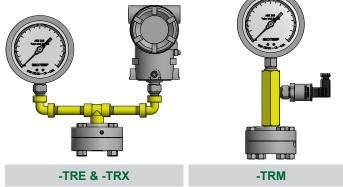

Remote Mounting a pressure instrument using flexible capillary is a common mounting method when the point of measurement is in a hazardous or inconvenient location.

		PVC Coated SS Flex Armor
	??" 	SS Flex Armor
Code	Description	Max. Temp
-P??	PVC Coated SS Armor, Threaded to Seal	400°F
-W??	PVC Coated SS Armor, Welded to Seal	600°F
-A??	SS Flexible Armor, Threaded to Seal	400°F
-B??	SS Flexible Armor, Welded to Seal	750°F
Note: ?? =	Length in feet (e.g. 05 = 5 feet)	

Assembly Notes: Capillary has a 2mm inner diameter unless specified differently by customer. Ambient temp limit of PVC coated armor is 250°F. Standard instrument connection is threaded (Smart Transmitters are welded), unless specified by customer.

#### **TREE ASSEMBLIES**

Tree Assemblies offer the ability to mount two pressure instruments onto one diaphragm seal, allowing the user to gain both a local indication and a remote signal without adding an additional pipe insertion.

Code	Description	Max. Temp
-TRE	Goal Post, Low Pressure Assembly (Max. 150 psi)	400°F
-TRX	Goal Post, Heavy Duty (Max. 3,000 psi)	600°F
-TRM	Compact Tree Assembly (Max. 3,000 psi)	600°F

Assembly Notes: Threaded joints are fully welded for consistent instrument orientation. Instrument connections are threaded unless specified by customer. Diaphragm seal must displace enough fluid to drive both instruments.

## **FILL GUIDE**

1

Diaphragm seals are designed to protect pressure instruments from hot process media and corrosive chemicals while minimizing any negative effect on instrument accuracy and durability. A well-made diaphragm seal can achieve this goal only if it is properly assembled, filled, and tested. REOTEMP's highly trained technicians use state-of-the-art equipment so that every diaphragm seal assembly is filled and tested to assure optimal instrument performance:

- 24-hour Minimum Fluid De-✓ gassing
- **Evacuated Instrument** √ Chamber Up to 10<sup>-8</sup> mbar Absolute Complete Fill Integrity Check

✓

- Fill-port Leak Test 1 Post-fill Static Test Verification of Instrument
- Calibration
- High-temp Pipe Sealant  $\checkmark$
- Used on All Threaded Joints
- (Welded Joints Upon Request) Tamper-proof (Inspection Seal) Lacquer used on All
- **Threaded Joints** Sturdy Diaphragm Packaging
- ✓ Protection
