

**Thank you** for purchasing a LightMap! Follow the steps below to get it installed and running. For more information or support, please visit our website: [www.lightmaps.io/FAQ](http://www.lightmaps.io/FAQ)

## Step 1 - Mount The LightMap

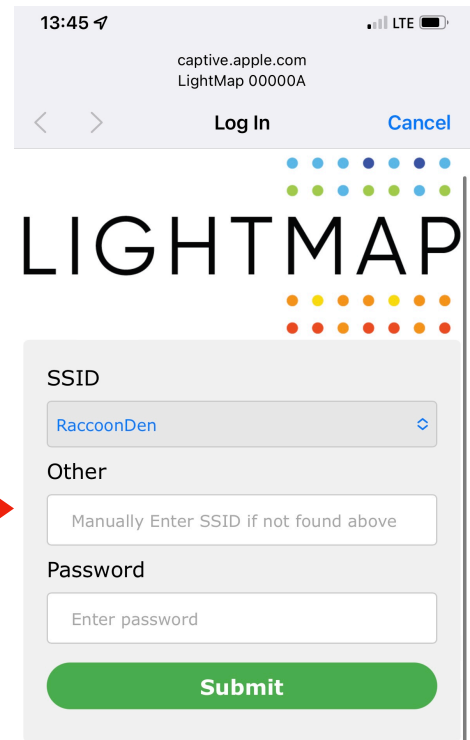

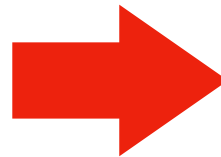

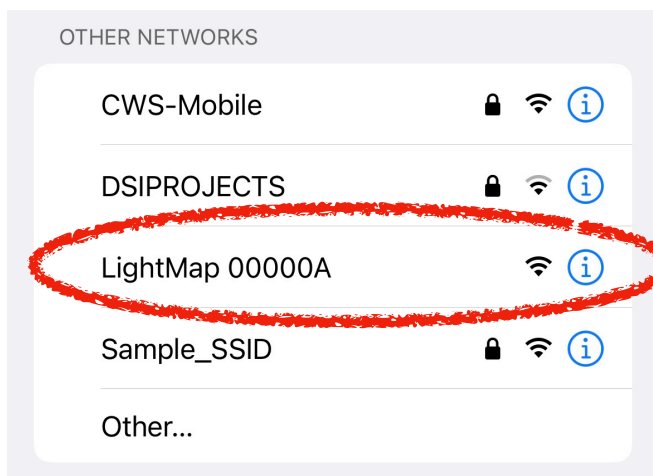

- ◆ Your LightMap has picture wire preinstalled. LightMaps weigh just about two pounds, so use an appropriately rated hanger to mount on a wall.
- ◆ LightMaps can also be leaned on a shelf or mantel if preferred.

## Step 2 - Power up!

- ◆ Using the included 24V power adapter, connect the LightMap power cable using the circular connector.
- ◆ Plug the power adapter into a standard wall outlet or extension cord.

## Step 3 - Get Connected

- ◆ On power up, the LightMap will alternate between green and blue lights. **When the lights are blue, you can use any mobile device or PC to connect to the LightMap Wifi Network.**
- ◆ **Once connected, a window will pop-up asking for your local WiFi name (SSID) and password.**
- ◆ **The LightMap will switch from blue to green and attempt to connect.**

## Step 4 - Interact

- ◆ The top-left corner of your LightMap is a gesture sensor. Wave your hand in front of it to see a 24 hour forecast. *Note: Each bar of the top-right indicator represents 3 hours of forecast time.*
- ◆ Hold your hand over the sensor for four seconds to shut off all the lights, and wave again to turn them on.
