## Safety Products for Temporary Traffic Control

### Model SZ-112 Drive-In Stand

#### Safety

The new SZ-112 Drive-In Stand is simple and safe to use. Unlike other drive in stands that you have to jump on or beat into the ground with a hammer, the SZ-112 has it's own built in driving device. Simply grab the upper mast and thrust up and down 5-6 times and you're done. No twisted ankles, cut legs or flying metal shards to cause injury.

#### Lightweight

Lightweight and compact, the new SZ-112 is easy to transport on any vehicle. Weighing just 6 lbs, this stand is easy to handle and easy to store.

#### Compatibility

The SZ-112 is manufactured with our universal bracket. This bracket attaches to the bottom of the vertical rib and may be adjusted to allow for greater bottom height of the sign. The universal bracket accommodates any roll-up sign using a 1" to 1-1/4" width fiberglass frame.

#### Universal Bracket

The Universal bracket will allow the use of any brand roll-up sign.
