MARINE-GRADE 316 STAINLESS STEEL CONSTRUCTION.

Now you can enjoy even longer-lasting performance for an Infratech heating system with our Marine UpGrade. While all Infratech heaters are constructed using high-grade, corrosion-resistant 304 stainless steel, Marine UpGrade heaters incorporate 316, a more robust anti-corrosive steel that offers enhanced protection for the harshest environments, including coastal, alpine, windy, humid and other demanding conditions.

Infratech's Marine UpGrade is ideal for use in settings with high exposure to the elements.

- The Marine UpGrade is available for C- and CD-Series and W- and WD-Series heaters and accessories, to complement a wide variety of residential and commercial spaces.
- Infratech's flush mount frame is available in the Marine UpGrade to support our most popular installation option.
