

## Step 1

Insert the adjustable wheels into the legs of the frame. Lock the wheels with the lock pins, and brakes.

## Step 2

Position the ladder frame as shown. Lock the wheels, and clip the horizontal braces onto the rungs.

## Step 3

Clip on diagonal braces onto the lowest rung in opposing directions. Ensure to lock them entirely. Frame is now self supporting.

## Step 4

Locate the platform on 2nd rung (approx 1.0m) level.

## Step 5

Install the next set of diagonal braces. Add next lift of 5 rung ladder frames.

## Step 6

Install the platform on 5th rung (approx 2.0m).

## Step 7

Add the adjustable stabilisers, then lock them entirely. Do not climb the platform until fully guardrailed.

## Step 8

Continue steps 5 and 6 until required working height is reached. Erect guardrails and horizontal braces. Guardrails should extend 1.0m past the platform in all cases. Do not climb to next platform until it is fully guardrailed.

## Step 9

Fit toeboards to all working platforms. Install ladders to all platforms.

## A typical 6.0m high Wide Scaffold

Other Sizes and Combinations Available

Ladders omitted for clarity.
