

neuroradium

Surgical Diagnostics

Neuroradium provides neurodiagnostic electrodes and probes that measure safety signals for surgical patients during intraoperative monitoring. Our products connect the patient to the neurodiagnostic equipment for monitoring bio-electrical signals throughout a case.

Neuroradium understands the importance of diagnostic quality and reliability. Our products are designed to be comfortable for the patient and to give an optimal signal with reliable feedback. We know the technician wants a product that is easy for them to use, comfortable for the patient, dependable for the physician, and flexible when conditions demand it.

Disposable Paired Subdermal Needles

Optimal stainless steel paired electrodes with easy separation, smooth penetration, and easy repositioning.

13mm	.4mm	14/Box
Needle Length	Needle Diameter	Quantity
Product No.		
SKU 1025	1.5m wire length	
SKU 1027	2.5m wire length	

Disposable Single Subdermal Needles

Optimal stainless steel single-needle electrodes with smooth penetration and touch-proof connectors.

13mm	.4mm	24/Box
Needle Length	Needle Diameter	Quantity

Product No.

SKU 1011 1.5m wire length

SKU 1013 2.5m wire length

Disposable Corkscrew Subdermal Needles

Optimal stainless steel, ultra-sharp corkscrew needles for easy penetration and a secure application.
