

POST-TREATMENT MONITORING

THE FINAL KEY ELEMENT IN SUCCESSFUL BED BUG TREATMENTS

The Catchmaster BDS2.0 and BDS Slider Bed Bug Monitors can be used to gauge the effectiveness of a bed bug treatment - decreasing the likelihood and severity of a future infestation. Knowing if your treatment was effective can be tricky. Both BDS monitors have been specifically designed for placement in hotspots where bed bugs are likely to reside. Using monitors in these locations can provide early notification should any bed bugs be missed during treatment or are re-introduced into the account. Monitor your accounts for bed bugs between inspections and be alerted early to an infestation.

BDS™ MONITOR LOCATION & INSPECTION CHART

Customer Name: _____ Address: _____

DATE	LOCATION	MONITOR PLACED	INSPECTION NOTES	INITIALS
_____	_____	<input type="checkbox"/>	_____	_____
_____	_____	<input type="checkbox"/>	_____	_____
