

DURABILITY GUIDELINES

The following chart provides the anticipated durability for vertical and horizontal surfaces by product type. This chart is for guidance only and applies to CheetahWrap's normal use and service. CheetahWrap does not warrant its product for these time periods.

Type of CheetahWrap	Vertical Surfaces	Horizontal Surfaces
Black & White	10 Years	2 Years
Standard Colors	8 Years	2 Years
Metallic, Pearl, Aluminum	6 Years	2 Years

Many factors affect durability including defects or damages attributable to improper installation and/or application, or the following:

- CheetahWrap vinyl applied to non-OEM paint or clear-coat substrates.
- CheetahWrap vinyl applied to uncured or un-dried paint that has poor bond to the substrate or underlying paint coatings.
- CheetahWrap vinyl applied to glass surfaces. CheetahWrap is not liable for any glass breaking.
- CheetahWrap vinyl applied to uncoated/unpainted stainless-steel surfaces.
- Removal from uncured or un-dried paint.
- Removal from substrates with aged paints, oxidation, or chalking.
- Application to any surface with low surface energy (such as many plastics or gel-coated marine surfaces). Substrates with dyne values of less than 30 dynes/cm are considered low surface energy.
- Substrates exposed to water submersion, such as watercraft or any other marine application.
- Vehicles subject to heavy rock chip abrasions.
- Use of different rolls of CheetahWrap vinyl per vehicle resulting in color variation. Color appearance may vary roll-to-roll.
- If harmful solvents are used to clean the product, or if the product is painted or coated in any way; or if other "aftermarket" products are applied to CheetahWrap.
