## HDT ANTI-FATIGUE MAT

## HDT (Heavy-Duty Top) Anti Fatigue

In a rigorous environment, exceptional comfort, dimensional stability and durability are the hallmarks of a successful antifatigue mat. Our HDT products are manufactured from specially formulated proprietary low static formulation vinyl compounds. HDT mats are a superior value with puncture resistance that exceeds comparable rubber products by over 90%. This increased spike resistance helps eliminate premature failure due to exposure to casters, heels, and other sharp objects. These materials are only available through the Rhino Mats and Matting division Ranco Industries.

• Top component (HDT wear surface) of mat shall be a solid (not expanded or cellular) polymeric surface that measures .160" thick. This surface shall be permanently bonded to a 3/8" or 3/4" thick closed cell polymeric sponge base, comprised of polyvinyl chloride, acrylonitrile butadlene rubber and chloroprene with a minimum density of 7 lbs./cubic foot. Overall thickness including HDT surface 9/16" or 1".

• Sponge base shall be beveled to within 1½" of the top surface to effectively taper the edges of the surface to the floor and create a visibly bonded incline around the perimeter of the mat, and seal the edge of the beveled sponge to the surface.
