U.S.A.

GENERAL INFORMATION

Progress is normally seen within 3-4 weeks. After 2 months of use, a horse will typically have to be shod or trimmed twice as often, an indication of better health.

Kombat Boots is not a feed, it is a top dress digestive aid. Keep in mind that the crude protein content is extremely minimal because it is 28% of an 8 oz. serving, equivalent to 2.24 oz. of crude protein.

The ingredients are all naturally occurring.

The amount and quality of yeast provided is the reason **Kombat Boots** is so effective.

Continue with existing feeding program, but note that **Kombat Boots** improves feed efficiency. It is not uncommon to have to cut back feed rations.

Kombat Boots is completely safe and cannot be overfed. Feed 1 scoop in the A.M. & 1 scoop in the P.M.

Yearlings and older must receive at least 8 oz. per day to see full results. Each bag/box contains a 4 oz. scoop.

Feed 8 oz. for every 1,000 lbs. of horse (i.e. a 2,000 lb. draft horse gets a minimum of 16 oz. per day).

Following directions, one 20 lb. bag will last one 1,000 lb. horse 40 days. One 46.8 lb. box will last one 1,000 lb. horse 93 days.

Keep product in a cool, dry place - shelf life is approximately 1 year.

Kombat Boots is a pelleted yeast digestive aid that provides 150 grams of *saccharomyces cerevisiae* in an 8 oz. serving. Named for its remarkable ability to quickly grow stronger, thicker hooves, **Kombat Boots** offers a superior product to the horse industry.

The unique pelleting process used to manufacture **Kombat Boots** provides an extremely palatable and easy to feed form of yeast. **Kombat Boots** is composed of 70% yeast. This amount is the key factor to its effectiveness. It is the only pellet on the market to offer this quantity and quality of yeast.

One of the most significant effects of adding enough yeast to equine rations is the stabilization of the hindgut bacterial population thus increasing nutrient digestibility. This nutrient digestibility is the main reason for the unbelievable results that occur in the hoof.

*- THE THICKNESS, STRENGTH AND GROWTH
OF THE HOOF IS INCOMPARABLE -*
